Made Happy For Life.

Great happiness came into the home of S. C. Blair, school superintendent, -2 at St. Alban's, W. Va., when his little -4 daughter was restored from the dreadful complaint he names. He says: "My little daughter had St. Vitus' -8 Dance, which yielded to no treatment

-8 but grew steadily worse until as a 4 last resort we tried Electric Bitters; -8 and I rejoice to say three bottles ef--8 fected a complete cure." Quick, sure cure for nervous complaints, general 8 debility, female weaknesses, impov--4 erished blood and malaria. Guaranteed by R. R. Bellamy's drug store. Price 50c.

Gives vigor, strength, vitality to your nerves, stomach and every part g of your body. It's easy to take; swal-4 low a little Hollister's Rocky Mountain 2.4 Tea; it does the business. Tea or -2 tablets, 35 cents. J. Hicks Bunting 5-8 Drug Co.

DEEP SEA FISHES.

There Being Nothing Else to Eat, They Live Upon Each Other.

"All the deep sea fishes are enormous eaters," says a naturalist. "There being nothing to eat but the life about them, they live upon each other. Every facility for killing and devouring is provided-luminescence to dazzle, swiftness and strength to overtake and overpower, knife blade teeth for tearing, abnormally large jaws for crushing. Whatever the prey or how ever large it may be, there is little prouble in swallowing it. The mouth Jawns like a cavern, and the stomach distends to hold a body even larger than the swallower. The appetite in fishes seems never wanting, and complete digestion with some of them is only a matter of half an hour." For this reason slaughter goes on unendingly. Usually it is produced only by hunger, but some monsters, like the bluefish, even when gorged, kill for pure love of killing.

Of the eternal warfare that goes on beneath the surface of the waves the same writer remarks: "They follow the prey like packs of wolves, and in turn are followed, band succeeding band, increasing in size as they decrease in numbers. The herrings eat the smaller fish, even their own young; they are barried by the bluefishes until a trail of blood stains the water, while following the bluefishes come the insatiate porpoises. Nothing saves the weaker ones but breed. Many thousands of eggs are spawned that a dozen or more may be hatched and brought to maturity. Billions are lost;

yes, but millions survive. "The herrings move on the sea in uncountable numbers—in banks that are miles in length and width, in windrows so vast that they perhaps keep passing one given point in unbroken succession for months at a time. Just so with the menhaden. A catch in a purse net of 500,000 is not infrequent. Such numbers are sufficient to withstand all the ravages of the natural enemy. The bass, the haddock and the pollock may kill to their hearts' sence of offerings. Prime crude fob content, and still the menhaden will

THE BLAST FURNACE.

In Cleaning One It Is Necessary to Use Dynamite.

The function of a blast furnace is the reduction of ores to metallic iron. The iron ore, like stone and coke, is put in at the top and the iron and slag are drawn off at the base. The temperature of the interior of a blast furnace when in operation varies according to circumstances, but the molten iron when drawn off is about 1,500 degrees F., indicating a much higher temperature inside.

To withstand such terrific heat, which is maintained by a powerful blast of air which acts much in the same manner as a forced draft on a boiler, the furnace is lined on the inside with a fine grade of fire brick, thoroughly burned. This wall of noncombustible material is about four feet thick, outside of which is the steel jacket of the furnace, about one-quarter of an inch thick.

The lining of a furnace will last from two to six years, according to the nature of the material smelted, the furnace being in continuous operation during that time. It takes about six weeks to reline a furnace.

After a furnace is "blown out," or ceases to be used, there is a quantity of iron which cools and solidifies at the base of the furnace. This is called salamander, and it is necessary to use dynamite to loosen this material and get it out of the furnace so that repairs can be consummated. Salamander has a ready sale, as it is a fine grade of pig iron.

good a blast furnace is never allowed to cool down or be taken out of blast encent at in annuls of several years for relining.-Bullimore Sun.

Striking. "Auntie," said Polly, ruefully rubbing her forehead, "that big photograph of you is a striking likeness, isn't "Do you think so, dearie?"

"Yes," said Polly. "It just fell off the mantelpiece and hit me on the forehead."

winkfield, (Br), 2,575 tons, Atkinson, Danderine

RS. ANNIE E. SHEEHAN. Weir City, Kansas.

You must remember that falling hair and dandruff are signs of decay, or a diseased condition of the scalp, and you must not delay treatment. To do so simply means more loss of hair, and a greater impoverished scalp, and finally no hair. The wise thing to do is to correct it in the start. Danderine works wonders in all such cases. It will quickly regenerate the enfeebled tissues, and make your hair grow more beautiful than it over was. NOW at all druggists, three sizes.

25c., 50c. and \$1.00 per bottle. ENOWLTON DANDERINE CO., Chicago.

IT'S IN THE DRAFT.

The secret of the fuel-saving qualities of this Buck's hot blast heater lies in the draft construction. It is so made as to allow large quantities of heated air to pass over the upper surface of the burning coal, thus supplying oxygen to the rising gasses, which are then converted into heating power.

Simple, isn't it? And yet it's new principle in stove building-not to be found elsewhere.

This stove will reduce your coal bill nearly one-third.

Let us teil your of its many advan-
