THE WHAT IS IT MOTOR.

Mr. Binter's Mysterons tias Gone to a Chemist for Analysis.

With a view of facilitating the rereduction into- manufactories of the new motor which the Winters Manufacturing company intend to generate from pure water by means of engines plentifully supplied with valves, Mr. Winters and Mr. Lawrence called on Wednesday at the office of the board of underwriters and obtained written instructions to submit a portion of the generated gas to a chemist for the purpose of ascertaining whether or not it is inflammable and whether or not it is explosive when brought in contact with arc. During the afternoon Mr. U. M. Stillwell, of 18 Exchange place, was engaged to make the required analysis. While awaiting the arrival of the chemist, Mr. Winters turned the water into the model engine in his Brooklyn workshop, and connected the lank, which was speedily filled, with his upright six-horse power Baxter

"I wastafraid it would frighten you if I showed you what could be done with this engine when you called the other day," he said. Then he turned on the gas and drove the engine wheel around for ten minutes, at the rate of 300 revolutions a minute. The gas was turned off before half of it had been exhausted. Mr. Winters said that there was yet power enough in the five gallon tank from which he had been drawing the gas to run a twenty o rse-

"Do you intend to apply the motor at first only to the Second avenue cars?"

was asked. "Oh, no, not if we can make immoclsewhere, as we are trying to do. The trouble is at present; that every one suspects us. We have submitted the generating engine to the fullest inspection, and the experts have expressed themselves satisfied. Nevertheless I can see that they are disposed to bethemselves satisfied. Nevertheless I can see that they are disposed to behave that it may be a trick. I hope the analysis may rid them of any such suspicion. Now, suppose the elevated road company should permit us to supply them with it, they would save money at once. The cost would be but half that of sicam, and one man with sense enough to push a lever and put on the brakes could ran an engine. Then there would be no dust, cinders or sparks, of which they comptain. We might apply it to manufactories to run lathes or any small machines, which are now run by treadles, by hand or by steam, at an equal saving. As I told you the other day, it can be epplied to anything to which sith the rose

T WORK AND BUILDING

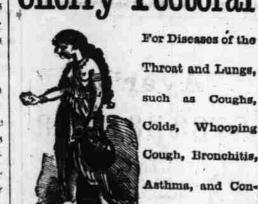

The Indiana Senatorship.

If all the democrats in the Indiana Legislature vote for Mr. Voerhees ha will still need two votes to elect him, and these he expects to get from the nationals. These number fourteen, and eight of these were formerly republicans and six democrats. The fourteen pretend, it is said, a determination to nominate a candidate of their own, and if they should happen to stand firmly united it is clear that Mr. Voorhees could not be elected. But it

lies in the fact that there are ten or twelve sound, old-fashioned, hard money democrats in the Legislature, who, if beautiful world, it is entirely your own they have the courage to make comrelegate him to private life. It is to be hoped they will do their duty. The United States Senate is not the live-liest body in the world, and the pros-pect of six full years more of Voorhees' interminable platitudes is one from which Senators and the country at large ought to be relieved as soon as

The reputation it has attained, in sequence of the marvellous cures it has produced during the last half century, is a sufficient assurance to the public that it will continue to realize the happiest results that can be desired. In almost every section of country there are persons, publicly known, who have been restored from alarming and even desperate diseases of the lungs, by its use. All who have tried it acknowledge its superiority; and where its virtues are known, no one hesitates as to what medicine to employ to relieve the distress and suffering peculiar to pulmonary affections.
