THE SENTINEL.

NEWBERN: FRIDAY, OCTOBER 25, 1833.

n Rail-Road Stock in Newbern, have reported a sum amounting to about thirty thousand dollars Though this is not more than ought to have been expected, we may still rejoice that even this much has been obtained. The far greater number of subscribers are men of comparatively limited means! but convinced that experience as well as necessity demanded their exertions, they had no hesitation in gving such assistance as was in their power. Bevand a doubt, the spirit of improvement has gone never g es backward." Most of the monied men

shook their heads and kept close. It is to be hoped

that Craven will go in for at least \$ 60,000. It has been suggested and we think with great propriety, that the contemplated Railway from Beaufort to Waynesborough, should commence at Newbern. otherwise, it could not be used till finished. Supposing that it should commence at Beaufort-and be constructed as far as Newbern-what practical be markets at both ends, with nothing to supply them. If commenced at Waynesborough, it would confer but little benefit until finished down to Newbern; but

We have heard of a Dutchman in the State of New York, who when he discovered that the great canal was about to run through his land, went and hung himself in a fit of despair. Five years afterwards, his farm was raised to three times its former value, by the very measure which he so fatally deprecated. He imagined, very probably, that by thus opening a way to market for the produce of such a vast quantity of uncultivated western land, the canal would reduce the profits of his wheat crops at least one-half. But the event falsified his forebodings. And thus it is with every great measure of liberal policy. Industry, if encouraged, will never become adrug, and if the productions of labour be brought to a large market, they will always find purchasers.

We observe with great satisfaction the present prosperous and improving state of our Town. Every commodity brought to market finds a ready and fair sale. The citizens of the adjacent country are satisfied with the prices, and believe that their labour is adequately remunerated. There is not a house in town which is not either occupied or engaged, and new buildings are gradually appearing in every direction. The number of merchants, also, has increased very considerably. We hope that these signs of prosperity may be as substantial as they are cheering, and that they may be followed by an increased diffuoion of information, (i. e. the Sentinel) and a generous encouragement of literature.
