

FOR THE FARM AND HOME.

Sheep for Improving Pastures.

A Massachusetts farmer says that a few years ago he had a rough, rocky pasture, which was covered with briars and bushes so thick that there was very little grass upon it. He cut off the bushes and put on sheep enough to eat everything that grew upon it for four or five years. They killed all the briars and most of the bushes. He sowed on some plaster of paris and that was all he did to it, and then he sold an acre of it was worth more and would produce more feed than three would before. If a pasture is heavily stocked with sheep and cut of all and cotton-wool is not to them to make up the deficiency of the food, great improvement will be made in the fertility and productivity of the pastures.

Food for Hens and Pigs.

Mr. J. N. Bartlett, Sr., Royalston, Mass., reported in the New England Farmer last winter the following satisfactory experience in feeding apples to cows and pigs. In 1880, in common with most other farmers about here, had large quantities of apples to dispose of. As soon as the earliest varieties were fit for domestic use, the unpicked ones were fed to my cow and pig, the feed of the pig being mostly apples, from the time it was about three months old until it was killed in the following winter, and I never raised a better steer. The apples were fed raw. I also began to feed them to my cow at the same time, but not regularly or uniformly until the commencement of winter. About the middle of November I began to give the cow daily all the apples that she would eat, which did not vary much from three-fourths to one bushel per day, or falling to less in any instance for a day, until the following April. This month it in the first half and half of the cow, the production of sweet milk and butter, and in saving of about one-half of the amount of feed consumed. In the summer, as usual, I am usually attracted to the pig, saying of my entire to an equal nutritious and healthy diet. The pig, however, is usually fed with the winter's crop. I can hardly attribute the result, saying of my entire to an equal nutritious and healthy diet. The pig, however, is usually fed with the winter's crop. I can hardly attribute the result, saying of my entire to an equal nutritious and healthy diet.

Household Hints.

If kid gloves are laid upon a damp towel for two or three minutes, they will go on with less chance of tearing. For a useful home rug, purchase a sheepskin and wash it thoroughly in boiling soap, and when dry comb carefully and an excellent rug is made for the foot of the stairs, the hearth, etc. Good yeast cakes can be kept in excellent condition if it is twice washed with two or three hard sprays of water and then dried and well pressed. This mass is afterward to be well mixed with water dust and stored in closed glass jars. To protect the ironing board from dust, take two paper dust caps, cut the bottom off from one, and paste this on to the top of the other to make the required height when down slip this over the board. The outer covering of the board must not be taken off after using, if this care is taken, and much less is saved. To wash a fine cambric handkerchief embroidered in colored silks, so that the colors do not run, the secret is to wash in a soap lather, very quickly wring thoroughly and then iron, so that it dries at once. There should be no soaking, and the embroidered corner should be kept out of the water as much as possible. A little alum in the water will make the process more sure.

A Curious Excuse for Murder.

Diphtheria in childhood is not generally received as an excuse for murder in later years, but it has lately been alleged in extenuation of that crime in an Italian court of justice. The assassin is a youth of seventeen, who, some months ago, after a quarrel with the attendant of a cafe, drew a revolver, and discharged four bullets at the unfortunate man, killing him on the spot. The facts were not disputed; there were plenty of witnesses, and the only provocation alleged was that the barman objected to this impetuous youth's going behind the bar to look for a cane which he said had been left there by a friend. Minervini, the homicide, is very respectably connected. His father had been in parliament, and he seemed to think it altogether too strong that he, a "gentleman," as he repeatedly called himself—should be called to account for shooting a waiter. He said he had been struck in the course of the dispute, and that consequently he was filled with rage. But witnesses testified that he had left the place and returned to shoot, and the judge gently observed that he was not so blind but that he could aim straight. Minervini's friends urged that he was of an ungovernable temper, and his doctor certified that since treating him for diphtheria, ten years ago, he had had fits of rage—in one of which, it appears, he had threatened to shoot a cabman. The jury found him guilty, and, on account of his age, he was sentenced to the light punishment of five years' imprisonment. However, in five years' time he will still only be twenty-two.

Why is it that a young man and a young woman will sit for hours and hours together in a parlor without saying a word; and then, when it is time for him to leave, stand an hour talking earnestly on the front stoop in the still pneumatic air?

A vague, but horrible rumor, is being handed around with blanched lips that Oscar Wilde will marry and settle in America. Just a few more straws on the donkey's back and war with the mother country will be inevitable.

market. In shipping fancy poultry to market send it dressed.

Recipes.

PIE CRUST.—One cupful lard, three cupfuls sifted flour, three-fourths cupful very cold water, a little salt; rub the lard and flour together, when thoroughly mixed, add the water, dropping it slowly.

SARATOGA POTATOES.—Peel and slice on a slicer into cold water, wash thoroughly and drain; spread between the folds of a clean cloth, rub and pat until dry. Fry a row at a time in boiling lard, salt as you take them out. Saratoga potatoes are often eaten cold. They can be prepared three or four hours before needed, and it kept in a warm place they will be crisp and new.

GRAHAM PUFFS.—Mix well together one-half of a cup of molasses, one-quarter of a cup of butter, one egg, one-half a cup of milk, one-half a cup of pure soda, one and one-half cups of good graham flour, one small teaspoon of raisins, spices to taste. Steam four hours and serve with any sauce that may be preferred. This makes a showy, as well as a light and wholesome dessert, and has the merit of simplicity and cheapness.

CABBAGE PUFFS.—One-fourth of a head of cabbage, one-half loaf of bread, one quart of milk, four eggs, butter, salt and pepper, beat the cabbage and thoroughly done, then chop it very fine; break the bread into fine crumbs; place alternate layers of the cabbage and bread crumbs in a dish, seasoning every other layer generously with butter, salt and pepper; finish off with a layer of bread crumbs; seal the milk; beat the eggs well, and add them to the milk, then pour it carefully over the pudding. Bake until light brown, half an hour should suffice. This method of preparing cabbage renders it as delicate as cauliflower.

If kid gloves are laid upon a damp towel for two or three minutes, they will go on with less chance of tearing.

For a useful home rug, purchase a sheepskin and wash it thoroughly in boiling soap, and when dry comb carefully and an excellent rug is made for the foot of the stairs, the hearth, etc.

THE OSTRICH WALTZ.

An Odd Sight in the Central Park Deer Park—How to Pick an Ostrich.

Mr. J. Protheroe, a young Englishman who has in Central Park, New York, a herd of twenty-three ostriches, recently imported from Buenos Ayres for breeding in America, went one morning with his herdsmen, an elon Cape Town, named Johnson, and a reporter, to the deer park in which the birds are confined. When Johnson opened the door he was greeted by a series of sounds suggestive of themselves made by a hog horn.

"That's what the Dutch natives of Cape Town call 'ostriching,'" said Mr. Protheroe. "It expresses the same feeling with an ostrich that cooing does with a dove. I'll show you how we pick an ostrich. Johnson, bring the dark herder, whom the birds regarded with unduly affection, provided a long, white stocking. He caught one of the birds by its neck, and inserted the head and neck in the stocking. The blinded bird exhibited some nervousness.

"This herd have been so long in confinement," said Mr. Protheroe, "that they are comparatively gentle when the stocking is pulled over their necks. They fight and kick vigorously some times when they have been accustomed to the liberty of a large farm."

Johnson led the herder to a side of the fence against which was a white cloth, and held it up. He held up a wing with the other hand, while Mr. Protheroe held the other wing, and with a pair of shears clipped off a white feather one inch from the skin under the wing. "It would not do," said Mr. Protheroe, "if you pull these feathers out. I'll show you a good one. We pulled out the tail feathers and those on the outside of the wings. One month after we cut off the large feathers under the wing, new feathers push out the old ones."

While Mr. Protheroe was speaking the long-haired herder was kicking frantically with the reporter. One of the ostriches was snatched up and was cradled by Johnson in his attempt to swallow it. Another tried to gulp down the reporter's coat, but finding a still not to the result desired.

"If you will stand behind me," said the young Englishman, "I will open the door and let the birds out for their morning exercise. They are dangerous when let at liberty."

Johnson pulled back the sliding door of the "box," and Mr. Protheroe, who was some time ago, said that you have not had the privilege of seeing in America before. Johnson gave a low whistle, and the ostriches came out, the "ostriching" of the birds was a noisy business. The ostriches rushed after him pell-mell. Their necks were craned out and their mouths were wide open. They ran about the enclosure in a frenzied fashion for several minutes, occasionally lunging into one another. Then they began dapping their wings and walking. It was a terrible sight, and it is so termed by ostrich farmers. The birds turn rapidly round and round, dipping their necks and swaying their bodies at each turn. A rhythm that could be set to music, perhaps their motions.

"It would be unsafe to go among them now, unless, like Johnson, you were familiar with them," said Mr. Protheroe. "Two of the male ostriches began to fight at this point. They faced each other with obstructed mouths, flapping wings and glaring eyes. Then they began a pecking match, which was followed by some high kicking, forward, backward and sideways. "While they are too tough to be much hurt by their own kicks, they have been known to break the arms and legs of men by them," said Mr. Protheroe. The birds retreated for California. Mr. Protheroe thinks his ostrich farming in America will be entirely successful.

Chironomy.

M. Alexandre Lemaire is preparing an important work treating of the science of chironomy, in which he is an ardent believer. According to him the hand is the indication of the character; past, present and future are written in the lines of the palm. When Lambert, who was organist of the Paris Exposition called on M. de Sauley and told him that everything was ready, and that he was starting under auspices which guaranteed his success, he met Desbarolles, who told M. de Sauley, when Lambert had gone, that the expedition would prove a failure. Desbarolles was laughed at, but before the enthusiastic Lambert could start, the war broke out, and he joined a free corps to meet his fate a Prussian bullet—under the walls of Paris.

In 1804, when the empire was at its zenith, the same man read in the hand of Napoleon the catastrophes which were to befall her after so much happiness. He saw the reverse of the medal, and grief choked his utterance. He could not tell what he had seen, but the empress told him that when she was quite a child a gipsy had read her fate, predicting her marriage to an emperor, her splendor and then her fall, with a long period of suffering, and then the scaffold. Desbarolles admitted that much of what had been predicted would be fulfilled, but that the lines of the palm denied that the lady would meet the same fate as Marie Antoinette, although her life would probably be ended in exile.

CLIPPINGS FOR THE CURIOUS.

Light and the Eyes.

Professor Flowering, of Harvard observatory, points out in Nature that the color of gaslight has nothing to do with its painful effect upon the eyes of students and others. To test this question he had a lamp made consisting of a tube of glass, 18 inches in length. One end was closed by a reflector, and the other by a piece of light blue glass. Two holes were made in the sides, through which passed the glass chimney of an Argand gas-burner. By experiment with a photometer, a position was found where the light received on a book was of the same intensity and very similar color to that from a window in day time at a distance of about six feet. A few months' reading, however, is sufficient to cause such a change in the eye that an ordinary gas-flame would be the ill effects being due to the intense heat thrown down by the reflector. And this, he thinks, is the source of the whole trouble in the ordinary gas-burner. The heat radiated by the flame, the heated chimney and shaft, and reflected to the painted page and all other white paper lying on the table, is the cause of the eye-ache. To remedy this, the lamp should be found by putting the tube and eyes in water, but it is only a temporary relief. The hot air from the lamp is also fatal, and should be contrived to be shut off in its injury to the vision. These evils may both in part be remedied by placing a pane of glass so as to intercept the rays about the lamp, before they strike on the book or the face. But it must be placed at such a distance from the lamp as not to feel too much heated.

The better the flame the whiter it is, and the more light is thrown off in proportion to the heat. Hence, students are to be commended for such lights as the students' and auditor lamps, which burn with a small heat, and very brilliant flame, as compared with their torches, which are very hot and throw off much light. Hence, anything which will tend in the future to prevent this widespread evil will be a boon to mankind. He had great hopes of the electric light in this respect. In at there was the maximum of light with minimum of heat. The rays were brought to a focus, and conveyed to the surface of the light from the incandescence of a thin strip in the near future, it is a remedy for this bad world, and will do that affects the human vision.

The Court's Mistake.

Judge Davis tried to tell some admirable stories of an old Illinois judge, one of which we chance particularly to remember. One of the judges was rather remarkable for conveying to jurors in his charges to the merits of the case. In one case he had done so with great plainness, but his names the jury later out for hours without coming to an agreement. The judge inquired of the juror what was the matter, and learned that in that one juror was hanging out against the other eleven. He sent for the juror, and, stating to the jurors that he had plainly intimated how the case ought to be decided, and he understood that the juror was standing against the other eleven. He proceeded to say to the juror sharply: "You obstinate juror was a very little man, and, as soon as the judge was done, he rose up and said:—

"Judge, may I say a word?"

"Yes, sir," said the indulgent judge.

"What have you to say?"

"Well, what I want to say is, that the only fellow that's on your side is Peck's Nona."

"BETH-PANNA."

Quick, complete cure, all along the Kidney, Bladder and Urinary Passages. Dr. Duggins.

For Tumor, Heavy Stomach, Rheumatism, Dropsy, May Apple Pills, 10c and 25c.

Caroline, a natural hair restorer and dressing, is made of the best and purest ingredients, and is recommended by the best physicians to restore the vitality of youth, and to color faded hair.

PREVENTION OF, FROM SCHELDING FROM THE RESIDUE, BY C. W. HAZARD, JR., & CO., N. Y. M. Ostrich farming, and other matters, have been given to you at all other cities.

CHERRY CREAM, face, perfume, and mouth skin care. By using Cherry Cream, you will find it the best and most perfect made by C. W. Hazard, Jr., & Co., New York.

How to Shorten Life.

Through a microscope you may only take a short cut, and neglect it. Alcoholic, the great English origin, and a safe, and it is only a short cut. "What would you have the power of?"

Dr. Roger's Vegetable Worm Expeller.

ALLEN'S BRAIN FOOD. M. R. Allen, 10c and 25c.

HOSTETTER'S CELEBRATED Bitters.

A SAVED BUT UNTILTED WOMAN.

(From the Boston Globe.)

Miss Florence... A woman who had been saved from a life of sin and misery, and who had been restored to a state of health and happiness. She had been a victim of a cruel and unjust law, and had been sentenced to a life of imprisonment. But through the kindness of a friend, she had been saved, and had been able to return to her home and family. She was now a free woman, and was able to live a life of peace and contentment.

She had been a victim of a cruel and unjust law, and had been sentenced to a life of imprisonment. But through the kindness of a friend, she had been saved, and had been able to return to her home and family. She was now a free woman, and was able to live a life of peace and contentment.
