

Western North Carolina is rich not only in its minerals, but also in its forests, not only in that which lies buried in the bowels of its mountains but also in that which covers their lofty sides and summits. This is especially true of Haywood county, the section recently visited by the Press Association. We found the mountains of that county many peaks of which were 1,000 feet high—all covered with dense and luxuriant forests of the most valuable trees. The principal species were white, yellow, poplar, linn, chestnut and oak, and they attain a remarkable size. Some of these trees grow to the wonderful size of 10 and 12 feet in diameter, and we were told of one that was said to be 12 feet in diameter. We were shown a church near Waynesville that was said to have been built entirely out of one tree. It is a Methodist church, called Kilian's chapel, is 24 by 44 feet in size and the tree out of which it is said to have been built was a yellow poplar 10 feet in diameter. There is a tree lying on the ground near Waynesville, across the trunk of which two men cannot see each other when standing on opposite sides and holding up their hands. These forests are vast in extent and seem almost inexhaustible and will be a source of great wealth to their owners. Already their value is being appreciated, and outside capitalists are investing there in. Saw mills are being erected all along the line of the unfinished railroad, and large piles of lumber are now awaiting the arrival of the iron horse to be shipped to the Northern cities. At the present terminus of the road (12 miles from Waynesville) we saw immense piles of lumber and logs awaiting shipment, and at Waynesville and intermediate points we saw the same thing. These vast forests are valuable not merely because of their own extent, but also because of the superior quality of their timbers. Some of the best specimens that we saw were of the red, yellow and white pine, and of the chestnut and hemlock, and of the Basswood, which is a perfect growth, and is built exclusively of water woods. The chestnut of this kind is of curled walnut, was especially beautiful and had been recognized the finest article on either continent. In the erection of buildings the lumber especially used is sawed from the yellow poplar, especially for ceiling and smaller building, while chestnut and walnut are used for ornamentation and in work. The lumber of the pine is the lightest, and the most abundant quantities of it.

Of course the soil, the produce such forests, must be very fertile, as is shown by the abundant crops grown wherever plantings have been made. Not only is this the case on the sides of lofty mountains, but also in the lowland valleys and broad river valleys, and is amply rewarded for his labor. Corn and wheat seems to grow as well on the mountains as in the valleys, and is assuming large proportions. This is especially the case in Madison county, through which we traveled in going to the Warm Springs, which produces tobacco that is not surpassed anywhere in the State. We were shown a field of tobacco, on which the owner had just received \$2,500 when all expenses—three hundred and eighty dollars—were paid. A man and his wife were shown a field of tobacco, on which the owner had just received \$2,500 when all expenses—three hundred and eighty dollars—were paid. A man and his wife were shown a field of tobacco, on which the owner had just received \$2,500 when all expenses—three hundred and eighty dollars—were paid.

A Destructive Fire.

The town of Columbia, Minnesota, was almost entirely destroyed by fire on last Saturday. A dispatch from St. Paul, Minn., dated 15th, says: The details of the calamity show a more complete destruction of property than was supposed from the news. The town was almost entirely destroyed by fire on last Saturday. A dispatch from St. Paul, Minn., dated 15th, says: The details of the calamity show a more complete destruction of property than was supposed from the news.

Tom Thumb Dead.

Charles Hayward, straggler, better known to the public as General Tom Thumb, died in his residence at Middlebury, Mass., at half past eight o'clock yesterday morning, of a long illness. He had been slightly indisposed for a few days, but nothing serious was suspected. The cause of death was attributed to a stroke of apoplexy. He was 67 years of age.

Our Minerals at Denver.

The great exhibition of minerals at Denver, Colorado, is to take place on August 1st, and, through the enterprise of the Richmond & Danville railroad company, North Carolina will have an opportunity of showing her superior minerals, side by side with the minerals of the grand west, and if the success of the mineral proposition and mining interests will only take the trouble to get the necessary specimens, a magnificent mining boom in the Old North State will be the natural result of the exhibition. A copy of exhibit of our North Carolina ore at Denver, will not only be the nucleus of an early and general development of the mines of the State, but will bring thousands of dollars into our pockets. In the interests of those who own and are operating mineral properties, the Richmond & Danville railroad company has determined to make an exhibit of the minerals of the region of country traversed by its line of railroad at the Denver exposition.

ORANGES AND FLORIDA.

LETTER FROM THE ORANGE AND FLORIDA ASSOCIATION - ORANGE'S NEW YEAR.

The Orange and Florida Association, which was organized in 1878, has just published its annual report. The report shows that the industry has made great progress since its organization. The production of oranges has increased greatly, and the quality of the fruit has improved. The association has also been successful in securing better prices for the fruit. The report also mentions the fact that the industry has been able to withstand the competition of foreign oranges, and that it is now in a position to export its fruit to all parts of the world.
