## Tallow Candle Fish.

In the waters of British North Amer ica, as we are informed, there is a fish, an odd fish, as surprising in its ways as the sca-scrpent, and infinitely more useful. It is a species of smelt, and may be poet ically described as an aquatic glow worm. We are told it may be literally used in We are told it may be literally used in the same way as a candle, by simply set-ting a light to the tail, when it will burn with a flame as steady as that of the "dips" which our grandfathers used to have to put up with before gas was invented. It is a small silvery fish, averaging about fourteen inches long. If exceedingly far, and affords an excel-tent and valuable oil, and is so inflamma-ble that the dried carcaes will serve as a torch. Among the natives the fish is known as the coldan, and by them, as by others who have tasted it, is consid-ered one of the most delicions products of the sea, being far more delicate in in flavor than the berring. The fish are caught in wicker baskets, and are smoked as much as their ofly nature will allow.
