

The Worlds Finest Tire

Made in Salisbury, North Carolina

CLOVER LEAF
HEAVY DUTY
Oversize Cords

Another Typical Testimonial Just Received From a Satisfied User of Carolina Made Products :

March 30, 1924.

"I feel sure you will be interested to know that I have enjoyed 35,000 miles of uninterrupted service from one of your 30x3 3-2 Cloverleaf Cord Tires used on the rear of my Dort Car. Four other tires of well known make were worn out completely on the opposite rear wheel, while the Cloverleaf was piling up this phenomenal service record. The Cloverleaf is STILL in service and will doubtless deliver several thousand more miles before it goes out of service.

Needless to say I consider this remarkable.
R. C. SWING, Lexington, N. C.

Better Tires Than You Have Ever Known

A Tire of extreme high quality, built for car owners who demand something more than ordinary service.

GUARANTEED 10,000 MILES AGAINST RIM CUTS AND BLOWOUTS.

CLOVER LEAF CORDS UNDERGO TEST AT GOVERNMENT HANDS

M. W. McConnell, president of the Paul Rubber company advises that the United States government requested the Paul Rubber company to send one of their Cloverleaf cord tires to Washington to be tested for tensile strength which test was made and similar tests on practically every other make of tire. The executives of the Paul Rubber company were very much elated over the news received from Washington a few days ago advising that the Cloverleaf cord stood at the top of the list for tensile strength.

"This confirms our claim," says Mr. McConnell, "that Cloverleaf cords, made in Salisbury, are the best tires on earth."

Mr. McConnell says that while the Cloverleaf cord has only been on the market one year, yet there are instances after instance where car owners have secured mileage in excess of their guarantee of 12,000 miles. Kirk's auto service in Salisbury have used a large number of Cloverleaf cords, and report that the first tire they bought has already given in excess of 20,000 miles of service and is still in good condition being used on a bus at the rate of about 1,000 miles a week.
