SERVICE BY PUBLICATION.
North Carolina, Chatham county.
IN THE SUPERIOR COURT.
June 2nd, 1925,
Pauline Alston,
vs.
Joseph Alston.

The defendant, Joseph Alston, will take notice that an action entitled as above has been commenced in the superior court of Chatham county, North Carolina, to obtain an absolute divorce from the defendant; and that divorce defendant will further take notice that he is required to appear at the office of the Clerk of the Superior court of said county in the court house at Pittsboro, North Carolina, on the 4th day of July, 1925, and answer or demur to the complaint in said action, or the plaintiff will apply to the Court for the relief demanded in the complaint in said action.

June 4th, 1925.
E. B. HATCH, Clerk,
Superior Court for
W. P. Horton, Attorney,
Chatham county.

THE OTHER SIDE OF IT.

Durham Herald.
We find the editor of The Chatham Record moving along the same road of thought that we travel on many matters of public discussion. The following from his most recent publication is a case in point:

"Some newspaper was lambasting the management of one of the prison camps because a guard shot two escaping prisoners. It does look hard for a prisoner to lose his life in an attempt to escape. Yet if those making the attempt are allowed to go unscathed because the guards cannot run them down and master them with their naked hands, it is evident that there would soon be no convicts to guard. If guards are not expected to shoot, they should not be allowed to have guns. The problem of managing convicts, we judge, is a more difficult one when it is viewed close up than it may appear from a distance. Judge Sinclair, for instance, announces that flogging in convict camps must cease. But what is the boss to do when a big burly fellow refuses absolutely to work?"

If guards are to have guns and not use them, why make them carry those weapons? It certainly isn't pleasant to lug around a double-barreled shot-gun and a belt full of shells loaded with buckshot; nor is it merely for purposes of physical exercises they are told to tote a rifle or a pistol and several rounds of ball cartridges. And, if the guards are not to carry guns, how long do you suppose prisoners would stay at work? They will all run away in 24 hours if they were not afraid of being shot. And, if you can't keep them in prison, why have a prison? Why have all our legal machinery if the court sentence is not to be carried out?"

As The Chatham Record says, there are two sides to that question, and if the public were just a little more familiar with the problem of handling and maintaining discipline among a bunch of criminals there would not be so much criticism of prison methods. Of course, the guards haven't a right to be unduly severe, inhuman or brutal, but they are expected to use judgement in sufficient quantity to know what to do and when to do it to maintain discipline among the menaces of society which have been sent there for society's protection.

Wild Ponies of West Put to Economic Use in Fattening Hogs.

Olympia, Wash., June 24.—The apparent success of an experiment in converting horse flesh into hog feed has given rise to the hope among eastern Washington stockmen that a practicable means has at last been found to rid Washington ranges of thousands of worthless wild horses, declares Harold Dobyns, field leader for the biological survey, who returned recently from a coyote hunting trip in Benton county. Cattle men and wool growers have long considered the horses a menace to the livestock industry, since the animals, described locally as "knothead Cayuses," place an added burden on the none too abundant range.

In recent months, Mr. Dobyns said an enterprising individual has established a slaughterhouse and hog feeding plant at Plymouth, on the southern border of the Horse Heaven country, long famous as its name implies as a horse range. The horses are purchased at an average price of about \$3 a head, which while low, enables the owners of the long neglected ponies to realize a profit by rounding up their otherwise valueless animals, and the supply has so far kept pace with the demand.

The slaughterhouse is modern in every respect, Mr. Dobyns said, and none of the carcass is wasted. The flesh is cooked with corn and other cereals for hog feed, the hides bring about \$2 each, or nearly the cost of the horse, while the bones are disposed of to fertilizer plants at a price said to average \$15 a ton. The hogs are shipped in fattened and then re-shipped to the markets. Approximately 600 hogs are fed at a time, while there is always a supply of horses awaiting slaughter in the corals. When the supply of cheap horse flesh is exhausted at Plymouth the slaughterhouse will be dismantled and moved to other fields, it was pointed out.

Keep your drinking water clean and pure by building a concrete well curb and platform, is the advice of E. R. Raney, extension farm engineer

That the dairy cow has a marked effect on the health of nations is shown in a recent study of 24 countries made at the Ohio State University. In New Zealand where there are 25 cows for each 100 persons the death rate is only 10 per 1,000 in habitants as against 31 deaths in Chile where there are about 5 cows to every 100 persons.

COUNTY AGENT PROVES THE VALUE OF LIME

Raleigh, N. C. June — An interesting demonstration on the value of lime has just been completed by George Evans in Davie County. In the fall of 1923 Mr. I. G. Roberts of Cana undertook this demonstration with Mr. Evans and although the land was very thin and poor the results show conclusively the value of lime applications.

The field of red clay soil was divided into four sections and ground pounds per acre. The remaining section was left unplanted as a check on the other plots. Then the whole field was sown to wheat using 200 at the rate of 1,000, 2,000 and 3,000 pounds of 8-3-3 fertilizer to the acre. In the spring a mixture of red and alsike clover was sown upon the wheat and 200 pounds per acre of 16 per cent acid phosphate was used.

A good stand of clover was secured all over the field and the lime showed that it was going to be of great benefit to the crop. The clover matured and was cut for hay, each section being weighed separately, with the following results:

No lime 492 pounds
1,000 lbs. lime 1,032 pounds
2,000 lbs lime 1,344 pounds
3,000 lbs lime 1,308 pounds

This land was of about average acidity and of much less than average fertility but the value of lime stands out as clearly from others as enunnu nu nu nu nu nu nu nu as though the soil had been rich. From this demonstration and others carried on over the State, E. C. Blair, extension agronomist at State College, recommends the use of 2,000 pounds of lime to the acre as this amount does as well if not better than larger applications.

"THIS IS TERRIBLE."

Monroe Enquirer.
When a police officer makes a mistake and kills somebody it is a serious matter. If the officer happens to be a prohibition officer, engaged in enforcing that particular law, his mistake becomes a matter of "grave national concern." Newspapers and individuals demand the repeal of a law that is so enforced, etc., and abuse the officer.

There is another side to the question, the officer's. The bootleggers and moonshiners, also shoot to kill. When the officers die the same newspapers and individuals look on silently, explaining that the incident shows that prohibition will never be enforced.

SUGGESTIONS FOR SUMMER PASTURES

Raleigh, N. C., June — "It is possible to overgraze a pasture by putting too many animals on it," says S. J. Kirby, pasture specialist for the State College extension division, "but as reasonably close grazing is beneficial, more loss is sustained by undergrazing than overgrazing."

To insure a good summer pasture, Mr. Kirby gives the following suggestions, "Weeds shade the pasture and use much of the plant food and soil moisture which results in poorer pastures especially during dry spells. It is therefore necessary to cut the weeds either by hand or a mowing machine."

"In new or cut over land, bushes should be cut down. If allowed to grow at will or until the full moon in August before cutting, as is too frequently the case, the pasture will need re-seeding the following year."

"Pastures should be top-dressed in the spring using either phosphoric acid, stable manure or lime, but it will not hurt to top-dress at any time. A combination of all three materials will in some cases be necessary or other materials of equal fertilizing value may be used."

Mr. Kirby states that where there is a good sod completely covering the ground that weeds give less trouble and the clovers and grasses are less likely to be injured by drought. "Let some of the plants make seed and then reseed either in the fall or spring," says Mr. Kirby, "and a good pasture will result."

ONE WAY TO STOP IT.

Monroe Enquirer.
W. M. Gordon, who travels around over the country quite a bit, is an observant citizen. Some time ago he entered a cigar store at a town in Eastern Carolina and there he saw a number of checks pasted on the under side of a glass show case. Each check was "no good," and had been returned to the cigar company which had accepted the worthless paper from various customers. On each check appeared this legend: "No Funds." But the store manager had placed the names of the persons who gave the bad checks just as plain where the public might see and know the guilty ones.

Publish the names of drawers of bad checks and the practice will soon cease.

IS FORD REALLY GOING TO BUILD IT?

Sanford Express.
According to reliable information gathered by the Clinton Independent, the source of which cannot be divulged, Henry Ford's railroad from his coal fields to the coast will pass through Sampson county. Work on the proposed road is already under way, and a tentative route has been surveyed by his engineers, says The Independent.

Cleanliness is the one big asset in milk and cream production, say livestock workers of the State College extension division. The barn, cow, and all utensils used in handling milk and cream should be clean if the best cream is to be produced.

A CAR LOAD

Fruit jars, Lids and Rubbers now in stock. Round jars Square jars, Good Luck jars, canning club jars, both zinc and glass top jars, sizes one-half pint to one half gallon. Jelly glasses, Ice tea and table glasses, tin cans for hand sealing. Wholesale price on jars in gross lots. We carry everything needed in canning, preserving and pickling supplies.

LEE HARDWARE CO.

Sanford, North Carolina

"Your trouble's right here in this cap"

"See this pin hole. It's all plugged up with mud and dust. That hole's the start of your gas feed system. When you use up ten gallons of gas ten gallons of air have to get into your tank. If the air can't get through the cap you'll get a vacuum in your tank and the gas won't flow freely. You'll have trouble sure as shootin' if you don't clean that hole out once in a while."

It takes years and years of practical experience to learn how to "shoot trouble" on every make of car that may come into a garage. It takes much longer to learn all the intricacies of petroleum refining. We've been at it for two generations and experience has taught us how to turn out good motor oils of uniform high quality year after year. People who realize that "experience counts" in oil refining ask for "Standard" by name.

STANDARD OIL COMPANY (New Jersey)

"STANDARD" [Polarine] MOTOR OILS
Oils You Can Trust!

Buy Tubes as Carefully as you buy Tires

THERE are two ways a car owner can buy tubes. He can go out looking for price—and get it. Or he can buy tubes that will give his casings a chance to deliver the mileage that is built into them. U. S. Royal and Grey Tubes are built to give mileage and get mileage. They resist heat, hold their shape and retain their elasticity. To get all the mileage out of a new casing or to make an old casing last—put a U. S. Royal or Grey Tube inside it.

U. S. Royal and U. S. Grey Tubes

United States Tubes are Good Tubes
