Mrs. White is spending the week here teaching in the school of missions being held at the Baptist church.

The theme for discussion at the meeting was "Stewardship in the life of Youth." The supper at six o'clock was served by Circle No. 3 of the W. M. U. of which Mrs. J. E. Keep Brooders Clean To Save Baby Chicks

Protecting baby chicks from occidiosis in the spring will go a long way toward reducing their death rate, says Roy S. Dearstyne, head of the State college poultry department.

The chicks are infected by picking up the tiny eggs of the parasite which causes the disease. The eggs are frequently found on the ground and in the brooder houses when older birds of the flock have been infected.

To control the disease, he recommends that all infected chicks be killed and burned or

buried deeply. Thoroughly clean out the litter or sand from the brooder house at least every other day and replace with clean dry sand about one-third of an inch deep. Continue this frequent cleaning until the disease is checked.

Feeding and drinking containers should be sterilized every few days with boiling water, since ordinary disinfectants are of no practical value on controlling this disease, Dearstyne points out.
