

# Month On The Farm

Spring work is in full swing on the farm, and April numbers in one of the busiest months of the agricultural calendar. As reminders, State College specialists offer the following suggestions, which, accepted, should result in a more bountiful harvest season:

H. R. Niewonger, Extension Horticulturist, advises the planting of all types of home garden crops. He lists the following vegetables to be planted this month, and the number of days after planting when they should be ready for use: Beets, 60 days; beans, 40; carrots, 75; sweet corn, 60; cucumbers, 60; cantaloupes, 120; chard, 40; celery, 120; Irish potatoes, 80; kale, 90; garden peas, 40; lettuce, 60; onion seed, 130; okra, 100; parsnips, 125; radishes, 20; squash, 60; spinach, 30; tendergreens, 30; tomatoes, 100; and watermelons, 100.

J. O. Rowell, Extension entomologist tells farmers to delay planting corn until May if they have been troubled in the past with stalk borers. However, he says that doubling the amount of seed when planting corn in low ground will usually allow for a good stand despite root worms, chinch bugs, and bud worms. In addition, Rowell advises that injury by flea beetles that sometimes eat small round holes in vegetable seedlings and potato leaves can be prevented by a Bordeaux spray, or by dusting with rotenone dust.

The suggestion of E. Y. Floyd, AAA executive officer, is: See your AAA committee man or county farm agent immediately and sign a farm plan before April 15 to qualify for Triple-A payments in 1940. If you have not already done so, the 15th is the final date for signing Farm Plans for 1940, and a grower must sign one of these plans if he wishes to receive a payment at the end of the year.

F. M. Haig, professor of animal husbandry, calls attention to the need for care of young animals born on the farm. Sanitary quarters are doubly important for the young, and control of lice and other parasites will result in more profit from the dairy, beef cattle, or swine herd, and the sheep flock, he says.

Arthur A. Arey, Extension dairyman, emphasizes the need for a good period. He suggests growing of four tons of silage and two tons of good hay for each mature cow in the dairy herd. Also, Mr. Arey advises that cows should be kept off the permanent pasture until the ground is firm and the grass has made a good growth.

H. W. Taylor, Extension swine specialist, says spring pigs should be castrated when they are about five weeks of age. Soybeans planted in rows and cultivated twice will furnish excellent grazing for swine from the time the plants are about 15 inches high until frost, he says. One acre of beans on good land will carry 15 to 20 shoats, provided they are on a full feed of corn and a good protein supplement.

Lewis P. Watson, Extension horticulturist, recommends that sweet potatoes be bedded the first week in April in order to have plants for setting about June 1. Instead of selling the best potatoes, he continues, and using the scrub and culls for seed, build up your own seed stock by saving the best for seed. Select smooth, well-shaped potatoes of desirable color and free from disease.

Look for the blue tag of the North Carolina Crop Improvement Association if you are offered certified cotton seed produced in this State, says A. D. Stuart, seed specialist. Many dealers have sold out of certified cotton seed at this time of the year, and farmers should exercise caution in buying any but the best stock available. Where germination of seed is low, enough extra seed should be planted to allow for the failure of the poor seed to come up.
