## COULDN'T DODGE IT—Tom Haigwood's Auto Kills Child

### Local Man Driver of Car Which Killed Child At Selma Sunday Night

Selma, Nov. 17.—Dolly Irene Deans, six-year-old daughter of Mr. and Mrs. Jack R. Deans, was fatally injured Sunday night when struck by an automobile driven by T. J. Haigwood, Jr., of North Wilkesboro, a teacher in the Laurinburg school system. The accident occurred at the intersection of the old Selma-Bagley highway, six miles north of Selma, and about 200 yards from the Deans' home.

Haigwood said the little girl, accompanied by five or six other children, was standing a few feet off the main highway as he approached in his car. Just as he came to the intersection, Haigwood related, the child ran out in front of the automobile. She was struck by the left fender of the car. The school teacher declared there was no way to avoid hitting the child. If he had swerved to the left, he said, the machine would have struck the child head-on, and if the car had been cut to the right it would almost certainly have struck the group of children beside the highway.

In the car with Haigwood was W. H. Beale, a Campbell College student, who confirmed the description of the accident. The little girl was rushed to the office of Dr. M. Hinnant in Micro by the driver of the car and H. B. Mazingo. She was found to have both legs broken near the thigh, a crushed chest, and bad body and head injuries. After treating the child at the office of the doctor she was rushed to the Johnston county hospital where she died around 1 o'clock Monday morning.

## GREATER PRODUCTION OF MILK REQUESTED

The greatest need for increased production under the nation's gigantic food-for-defense program in 1942 lies in the field of dairying, says John A. Arey, extension dairyman of N. C. State College. Yet existing facilities for production in relation to probable needs indicate that dairy farmers of the country face a different task in meeting the national 1942 production goal of 125,000,000,000 pounds, an increase of 7 percent over the 117,000,000,000 pounds expected to be produced in 1941. However, North Carolina farmers will find the demand not too difficult to meet, since they have been asked to increase production by only 4 percent. This year it is estimated that Tar Heel cows will give 1,462,000,000 pounds of milk. Next year their goal has been set at 1,520,000,000. At the same time, North Carolinians have been asked to add 10,000 milk cows to their herds
