SAVE YOUR CORN CORS AND SHUCKS!!! TO THE PLANTERS OF N. C.

TO THE PLANTERS OF N. C.

The undersigned has obtained letters patent to enble common Will stones (or rocks) now in use, to
grind CORN, COR and SHUCK, into meal, for horses, miles, cattle, hogs, &c., thereby saving more
than one third of a crop, which is an important istem with planters. The machine y used for the
shore purpose is simple and durable, and cannot
with law means, get out of order. It will last as
long as the stangal last, with an excepte of 50 cents. doing as the stance last, with an expense of 50 cents every five years. To enable the common miletones to grind our even into med, requires no new huldings or exten power. It can be also applied to thorse miles, threshing machines, gins or any given power knews. The same mill will grind one-third more of corn med by the introduction of the MARSHALL'S LINEN THREAD. more of corn meal by the introduction of this ma-ehlnery, and can be changed from grinding corn in the shack, to grinding corn meal in the space of thirty seconds. Corn alone when feel to stock, is said to he by the most practical and scientific planters, consti-gating in its effects, producing founders children and sarious other mal dies which are incident to such various other mil dies which are incident to stress firinding cobs and shick with the corn makes a food congenial with their nature, and cannot produce any of the serious results above mentioned. Stock, when fed on corn exclusively, are deprived of the benefits of fed on corn exclusively, are deprived of the benefits of distension. (20 necessary to the proper health of anotimels.) by their being usable to est a sufficient built to produce distension before the amimal becomes gorged. Cobs and sharks ground with the corn produce his necessary distension, wishout any danger of diseases arising from overesting Corn cob and shark meal is improved by scalding, and still more by a partial for neutrino. All the preparations helitized digition for logs. But horses and mules will not ear formented booth, consequently they will course it day fermented tood, consequently they will require it dry or partially wet with cold water. Rosses, males and ozen, when fed with unground food, void much in an undigested State, which is of course lost for all hemeficial purpose.

Having been sulicited by Maj. Collins to have
my Mill adjusted to grind Corn in the Ear and Shuck
I consented that he should do so as an experiment,
and I am able to say that it grinds corn in the shuck,
at the rate of 30 hushels per hour; and the dressing
of the stones is an improved, that it grinds shelled
corn more than twice as fast as before, and by my
watch, at the rate of 15 bushels per hour, and the
med finer than usual. I deem it a valuable improvement, and shall purchase the right to rae it,
as it will afford me a spendy way of feeding my horses and cattle, and save much thereby. ses and cattle, and save much thereby.
