

For the Watchmen.
TIME.
Time, three points away with one hand.
Time benefits of dominoes each hand.
Time levels every grade to equal state.
Time places lowly equal to the great.
Time causes flowers to bloom on every hand.
Time leaves in turn, the castles of the grand.
Time causes the simple pleasures to grow.
Time breathes of youth and young and new.
Time wreathes the flowers in two power man's view.
Time makes the flowers of high honors to tread.
Time waxes to grow, the flowers of the world.
Time is a great power, the flowers of the world.
Time makes the flowers of high honors to tread.
Time waxes to grow, the flowers of the world.
Time is a great power, the flowers of the world.

and he goes up, and up, and up, till he looks no bigger than your finger nail, and the first thing you know he comes down, and down, and down, and is a filler himself on the curbs of a dead horse by the side of the road, and "He played on a harp as a FAO and strings, spirits of just men made perfect."

And that's the Method, and they may be "skinned into the squirrel rind" up into a tree by the Method, believe in granite on from one degree of grace to another, and finally on to perdition, and the spirit of '93, and up, and up, and he jumps from limb to limb, and finally he lands on the other side of the road, and he is a filler himself on the curbs of a dead horse by the side of the road, and "He played on a harp as a FAO and strings, spirits of just men made perfect."

AGRICULTURAL
Watering Cattle.

From time immemorial, according to the law of our country and the regular business of reason, winter has commenced about the first week in November. By now, then, if it is a speedy approach, we would expect our readers to have made suitable provision for sheltering their cows during the coming winter. After the abundant season of vegetation, with which they have been blessed, there is probably, but few stock men in good condition to encounter the changes, and well able to resist the rigors of storm and tempest, provided they are furnished with adequate amount of protection and good substantial provisions. As a suitable thing, cow-houses and stalls for cattle are to be confined in them, they appear to answer a very good purpose. Cows, confined in such a manner, are better protected from the elements, and they are not so liable to the north of cows. An open yard of such a nature, with a shelter on the most exposed side, which they can retreat from the inclemency of the weather, and from which they can emerge when the sun is shining, is a very sufficient in our climate. They should also have free access to running water. Cows drink a great deal, and their health is promoted when they can take their thirst at will. They should be fed frequently on good food—not too much at a time, and supplied regularly with salt. These conditions are very good, which, with a little system, and the daily oversight of the owner, will insure but little trouble, and they will be able to winter out with good results, even the "starving" cow, with a little system.

THE SOIL TO ITS PRISON HOME.
The soil is the life of the farmer. It is the foundation of his wealth. It is the source of his food. It is the mother of his crops. It is the nurse of his stock. It is the home of his life. It is the basis of his power. It is the source of his strength. It is the foundation of his hope. It is the source of his joy. It is the home of his peace. It is the basis of his rest. It is the source of his love. It is the foundation of his faith. It is the source of his hope. It is the home of his peace. It is the basis of his rest. It is the source of his love. It is the foundation of his faith.

A FAMILIAR EXPLANATION
When we look at the world, we see a great variety of things. We see mountains, and valleys, and rivers, and oceans. We see cities, and towns, and villages. We see people, and animals, and plants. We see a great variety of things, and we wonder at them. We wonder at the beauty of the world. We wonder at the power of the world. We wonder at the wisdom of the world. We wonder at the love of the world. We wonder at the faith of the world. We wonder at the hope of the world. We wonder at the peace of the world. We wonder at the love of the world. We wonder at the faith of the world. We wonder at the hope of the world. We wonder at the peace of the world.

Watering Cattle.
The best way to water cattle is to use a trough. A trough is a long, narrow, shallow container that can be placed in a field or pasture. Cattle can drink from it at any time. This is a very convenient way to water cattle, and it is also a very economical way. It saves the farmer the trouble of carrying water to the cattle, and it also saves the water from being spilled. A trough is a very useful piece of equipment for any farmer who has cattle. It is a simple, durable, and easy-to-use device that can be used for many years. It is a great investment for any farmer who wants to keep his cattle healthy and happy.

to be a waste of time and material, to convert the elements of vegetable growth into living forms twice before they are made profitable. Why grow a lupine or clover plant one season, to be buried, in order that from its remains, a cabbage or a turnip may be produced? Why, if you build a house, do you not fetch the materials direct from the quarry? These questions would be unanswerable, did plants obtain all their food from the soil. But such is not the case, a great portion of the bulk of green crops is obtained from atmospheric sources; and after a green crop is ploughed in, the soil necessarily contains more of the organic elements essential to vegetable nutrition, than it did before the crop was grown; it is richer, in fact, by the carbon, oxygen, hydrogen, and nitrogen, which the green crop has obtained from sources independent of the soil. In like manner, the crop grown after a green crop has been ploughed in, has the advantage of a ready supply of mineral elements, which have been worked up by the roots of the fertilizing crop from the soil and sub-soil, and which in many instances, owing to their sparing solubility, are with difficulty obtained under ordinary circumstances.—*Praeger's Farmer.*

Recipe for Curing Meat.
Those who will carefully adopt our method of curing pork and beef, will be enabled to enjoy as fine hams, tongues, "dried beef," and rounds, as the Emperor of all the Russias can command, always providing that the meat cured is of the best quality. It is this:

To one gallon of water,
Take 1 1/2 lbs. of salt,
1 lb. of sugar,
1/2 oz. of saltpetre,
1/2 oz. of potash.

In this recipe the pickle to be prepared is any quantity desired. Let these be mixed together, until all the ingredients are dissolved. This pickle is to be put in a tub or barrel, and the meat is to be put in it. The meat is to be packed in the tub or barrel, and it is to be covered with the pickle. The tub or barrel is to be placed in a cool, dry place, and the meat is to be left in it for two days after packing, during which time it is to be sprinkled with powdered saltpetre.

PROSPECTUS
OF THE
RAIL ROAD TIMES:
AN INDEPENDENT JOURNAL,
Devoted to News, Internal Improvements, Education, Agriculture, Manufacture and Commerce.

WE have that the interests of the people of our State demand such a paper, and believing that we are free from the political parties and quarters of the day, devoted to such topics, with the kind they desire, we confidently enter upon this enterprise with the assurance of meeting and meeting their approbation and support. Our object is to make "The Times" the mirror of the State, to report all that is going on in the various departments of the State, and to be a constant and reliable source of information to the people.
