

The Tarboroan

BE SURE YOU ARE RIGHT, THEN GO AHEAD. - D. Crockett.

VOL. 70. NO. 13.

TARBORO, N. C. THURSDAY, MARCH 31, 1892.

PRICE FIVE CENTS

ADVICE TO WOMEN

If you would protect yourself from Painful, Profuse, Scanty, Suppressed or Irregular Menstruation you must use

BRADFIELD'S FEMALE REGULATOR

CANTONVILLE, April 26, 1892. This will certify that two members of my immediate family, after having suffered for years from BRADFIELD'S FEMALE REGULATOR, were cured by its use. The effect is truly wonderful. J. W. STRANGE, BRADFIELD'S FEMALE REGULATOR CO., ATLANTA, GA. FOR SALE BY ALL DRUGGISTS.

Offers professional services to the city of Tarboro and vicinity. Office on Main Street near Coker's corner.

DENTISTRY.

A Full Graduate of Dentistry. Offers his services to the people of this vicinity. Office in Ansteth Building, former Y. V. C. A. building. J. I. BATTLE.

JOHN L. BRIDGERS & SON,

Attorneys-at-Law,

TARBORO, N. C.

D. DON WILLIAMS, JR.,

DENTIST.

Graduate Baltimore College Dental Surgery. Office formerly occupied by DR. I. N. CARR.

101y TARBORO, N. C.

H. A. WILLIAM, DOWELL-GILLIAM

WILLIAM & SON

Attorneys-at-Law,

TARBORO, N. C.

Will practice in the Counties of Edgecombe, Hatteras and Pitt, and in the Courts of the First, Second and Third Judicial Districts, and in the Circuit and Superior Courts at Raleigh.

T. P. WYNN, M. D.

PHYSICIAN & SURGEON,

TARBORO, N. C.

Office next door to Hotel Howard.

TO THE PUBLIC.

I am Prepared to do all work in the

Undertaker's Business,

at the shortest notice. Having connected with my shop the repairing business. All work left at my shop shall have prompt attention.

PRICES MODERATE.

Also a first-class HEARSE for hire. Thanking my friends for their former patronage, I hope to merit the same, should they need anything in the

Undertaking

Repairing Business

My Place is on Pitt Street Three Doors from the Corner of Main.

E. J. Simmons.

Bright Tobacco.

FOR BRIGHT TOBACCO BUY THE BEST

FERTILIZERS.

In order to secure these call on

H. K. NASH, JR.

ALSO—

LIBR. KAINIT, ACID PHOSPHATE AND COTTON FERTILIZERS.

March 9, 1892. 9m1

A Big Tobacco Crop

Can be made by using the Celebrated

Navassa Guano,

Special mixture we have made for

COTTON & TOBACCO.

A few tons SHELL LIME on hand.

ROCK LIME in any quantity.

JAMES R. GASKILL,

March 9, 1892. 914

A Dislocated Shoulder.

Will Coffey, colored, driver for W. W. Jefferys & Co., Tarboro, was injured by the axle of his horse being struck between the shafts when he was thrown down and cramped upon. His shoulder was dislocated.

The preparation after the Grip is entirely overcome by Hood's Sarsaparilla. It really does make the weak strong.

The cool winds chill the heart of the ice cart driver, and he now sits shivering on his box, a blue nosed victim of despair; the striking words "Use Dr. Bull's Cough Syrup" stare him in the face.

Worth its weight in gold, Salvation Oil. 25 cts.

Folk Emphatic.

L. L. Polk said to the National Democrat, with emphasis and feeling: "The St. Louis Convention was a Third party movement; the platform adopted was a Third party declaration, and the Omaha convention was a Third party ticket; there is no doubt about this. It is inevitable. It cannot be prevented. I don't know who will head the ticket, but I expect to be nominated for the second place. A Northwestern man will be selected for the presidential nomination."

Your Blood

Undoubtedly needs a thorough cleansing this season to expel impurities, keep up the health-tone and prevent disease. You should take Hood's Sarsaparilla, the best blood purifier and system tonic. It is unequalled in positive medicinal merit.

Hood's Pills are purely vegetable, perfectly harmless, effective, but do not grip or gripe. Be sure to get Hood's.

Pleanty of Them.

An Asheville Citizen gave an interesting account of a crystal quartz containing a drop of water. A Raleigh man responded that he had a remarkably handsome specimen of clear limpid crystal also containing a drop of water. R. L. Cook, prescription clerk at McNear's pharmacy has a fine amber like about an inch and a half long containing a small drop of water which as the quartz is turned moves up and down a tubular space. It came from Kings Mountain.

The Preacher's Call Took Fire.

MANKIN, Va., March 20.—The Rev. Boles, the pastor who has been holding revival services here, met with a serious accident. A furnace used in the church for heating water for baptisms suddenly exploded, and the Rev. Boles carried it out. He had the misfortune to be wearing a red shirt, which also took fire, and in an instant his clothes were scorched. Both of his arms were burned and charred in a frightful manner, and the attending physicians say his injuries are fatal.

An Infant at 29 Years of Age.

UPPER SANDUSKY, March 19.—There died last night at Waton, in the western part of this county, one of the most remarkable of creatures, an "infant," aged 29 years. The child, or young man, or whatever it could be called, was the son of Austin Boden, and during all the years of his life was going more than a mere babe. It developed in no respect and died in its cradle. It could not walk nor talk nor recognize any one, and was helpless when it reached its manhood as the day it was born. Doctors were completely baffled and could do nothing, and for twenty-nine years its death had been patiently awaited.

Around the World in Eighty Days.

Did the Verac ever think that his imaginary Phileas Fogg would be eclipsed by an American, who once made the circuit in less than eighty-three days? But Phileas had to take "second money." The fame of Dr. Pierce's Golden Medical Discovery has gone around the world long ago, and left its record everywhere as an precious boon to every nation. In the whole world of medicine, nothing equals it for the cure of scrofula of the lungs (which is Consumption), coughs and bronchial troubles such as to this remedy, and the blood is purified by it, until all unguishy skin blotches are driven away. Don't be skeptical, as this medicine is guaranteed to every purchaser. You only pay for the good you get.

Burdet on the Drummer.

"He looks over my shoulder as I register after him, and hands me a card with a shout of recognition; he peeps over the register again and watches the clerk assign me to ninety-three. 'Ninety nothing' he shouts. 'Who's in fifteen?' The clerk says he is saving fifteen for Judge Drysdale. 'Well, he's a blowed,' said my chery friend. 'Give him the attic and put this gentleman in fifteen.' And, if the clerk hesitates, he seizes the pen and gives me fifteen himself, and then he calls the porter and orders him to carry up my baggage, and put a fire in fifteen, and in the same breath adds, 'What time will you be down to supper, Mr. Burdette?' And he waits for me, and seeing that I am a stranger in the town, he sees that I am cared for; that the waiters do not neglect me; he tells me about the town, the people and the business;

A Good Speech.

One of the best speeches delivered in Congress since the late debate was a fifteen-minute one by Congressman Burton, who in substance said: I have labored, so far as personal effort is concerned, to postpone the consideration of this bill, believing that by another session public opinion and common sense would prevail to such an extent as to render the passage impossible and its prompt defeat inevitable. These efforts have been unavailing, and the responsibility for its present adoption rests upon the shoulders. For a, I am glad to meet the issue, now that it is before us, happy to confront a separation with experience and a fallacy with the overbearing truth.

The Vatican.

The Vatican, the ancient palace of the Popes, is the most magnificent building in the world. It stands on the right bank of the Tiber, on a hill called the Vatican, because the Latins formerly worshipped Vaticanum, an ancient circular deity, at that place. Exactly when the building was commenced no one knows. Observation is known to have inhabited it over a thousand years ago. The present extent of the building is enormous, the number of rooms is the lowest computation being 1,125. Its treasures of art, statues, ancient gems, paintings, books, manuscripts, etc., are to be compared only with those in the British Museum.

Don't be Deceived.

Third Parties are requested to read carefully the following from the Roanoke Post: The man who has discovered the necessity of a Third party in North Carolina, reminds us of a carpenter who wants to get a job. He goes to Mr. Jones and finds a great many faults in his nice residence, telling him that it is old looking, ill-shaped, timber rotting and very unsafe in a storm; that if he will consent to it, he will pull it down and build a nice or, more comfortable and safer home, using all the old timber, and at a small cost. He does not tell Mr. Jones about how much of the timber, that is still sound and good as new, that will be ruined in tearing down the old building, nor of that which will not fit in the new. Or, he is after a job; and if he can only get the consent of Mr. Jones to tear down his house, he will then build the house, and Mr. Jones must "do the rest" foot the bills, etc. Don't be deceived; parties, like houses, cannot be torn to pieces without loss of much good material.

Women who Die Early.

Many of our most beautiful and accomplished ladies die before they have reached the prime of life. Of those who live to middle age only one in two hundred is sound, the other one hundred and ninety-nine are sufferers. Why is it? Self-neglect. The shattered health can be restored; the home made happy, and your life lengthened if your conscience at once.

How to Plant Potatoes.

In "How to Plant Potatoes" for 1892 these points are summarized after experience and observation: Potatoes seem to do best in warm loam, sandy or gravelly soil. The land should be thoroughly plowed a good depth, though not deeper than the soil really is. If commercial fertilizer is used, it should be in preference to yard manure, which can be better used on other crops, thoroughly mixed with soil or it will do little good and perhaps harm, because of its strength. If not using a planter, open furrows and sow seed, then follow with suitable water closed up as narrow as possible, before dropping seed.

Plant as early as the season will permit.

Just as soon as the soil is dried off sufficiently to work well without packing. Before the plants get up and while they are fully a half inch from the surface, go over the field with a weeder, if you have one, and the best substitute if you cannot get a weeder. Either a heavy bar or very light smoothing-harrow will do very well. Repeat the operation when plants are fully up, one to two inches high, and again once or twice as circumstances require, until plants are eight or ten inches tall. Cultivate them, throwing a little loose soil up around the plants with winged teeth, then hand-hoe only as necessary to keep down a few stony weeds that have escaped the previous processes. Keep the weeds while they are very small and keep the piece clean till digging time and that first work on the crop will be correspondingly easy.

England in 1879.

England in 1879 established her money upon a firm basis (gold), and has never departed from it, altered her standard or tampered with it, and as a result, the world does its business with the pound sterling as its universal measure, its unit of value, and London has become the capital of the commercial world. And yet, why, when we need for our commerce, when we need for our commerce, there are those who would, by the passage of such a measure as the Bland bill, cause distrust of American money and of our commercial stability in every part of the world. We never needed a policy of stability more than now. Keep the standard of our money the gold dollar and we shall draw the commerce of the world to our shores, and after within the trade of the world will be measured and all commercial transactions be based upon our dollar, which, because of its decimal character, is more convenient than the English pound. If we maintain our standard we can never have too much or too little money, and we shall draw the world's commerce will take care of that, and higher interest will bring it here when needed, while low rates will expel it when we need commodities more and money less. What the West and South both need is the early and thorough development of the resources, which follow the railroad and yet if we have free and unlimited coinage of silver it will stop railroad building outside of the older States. Existing companies have too many gold obligations now outstanding to care to incur more; new companies would fear to go into debt upon that basis and yet capital for such uses could be secured upon bonds, the principal and interest of which would be payable expressly in gold, the standard and only standard of value among civilized people. Not only would old roads be unable to extend, but many of them would be ruined; all or nearly all of their bonds and other obligations being payable in gold while their income hereafter would be in silver. A standard of silver standard would be a proclamation to the sections of the country that need them that no more railroad shall be built among them and that, to enrich a handful of silver producers and schemers, the entire South and West are to be set back a generation or two from their natural and certain fortunes.

Why he quit Cigarette-making.

"I'm going to quit smoking cigarettes," said a young man, who had long been a smoker. "It isn't because it is a vice habit that is going to carry me down to an early grave, or anything of that sort. One placed me, or rather a young lady, in a very embarrassing position. There is a certain charming young lady on St. Anthony Hill whom I should like very much to marry, and I know the facts as I do. But I am not able to support a wife, so I have never said a word to the young lady's parents. Well, the other evening when I took a stroll it was about half past nine when we returned to the house, so I did not go home, and I lighted a cigarette. When she went into the house, I of course, kissed her good-night, and without giving it a thought, she went in, bade her mother good-night, and kissed her also. The old lady immediately detected the odor of the cigarette on her daughter's lips, and questioned her about it. The poor girl had no choice but to acknowledge that I had been there, and she smoked a cigarette. What she was going to tell me about it, I had not the courage to ask her what course she chose. Now you know why cigarettes and I will be strangers in the future." Toledo Blade.

The Reports of the condition of the German Empire.

The reports of the condition of the German Empire, which are not largely collected, are of great significance. The chronic instability of the empire, which is a result of the political situation, is a source of great concern. The reports indicate that the empire is in a state of great weakness, and that the political situation is becoming increasingly unstable. The reports also indicate that the empire is in a state of great poverty, and that the economic situation is becoming increasingly dire. The reports are a source of great concern, and they indicate that the empire is in a state of great danger.

Dr. Theodor Wolf, lately the State Geologist of Ecuador.

Dr. Theodor Wolf, lately the State Geologist of Ecuador, has made a special study of the Andes of that country, which he says are between ten and twenty miles higher from the Pacific coast than most of our recent high peaks. Out of 50,000 births in Scotland during the last three months of 1891, 2,844 were illegitimate. In the corresponding months of 1890, the illegitimate births averaged 10.3 per cent, and running in no county to 19.1 per cent. The number of deaths was a trifle above and the number of marriages a trifle below the average of the past ten years.
