Over the forest-clad hills for some our way, continually slashing a road was a deep ravine.

It was among the rocks on the precipitous side of this ravine that they had seen the bos on the evening before. About half way down, or, perhaps, fifty feet from the gravelly bottom, they showed us the spot where he had lain, and the hole in the rock into which they said he had glided at their approach.

As he was not now in his hiding place we set diligently to work to search every rock and bush in the vicinity. Pedro, meanwhile, left us, and, going down to the dried up river bed, began to seek him beneath the bushes overhanging the sandy margin. He was very soon

I should to him to hold him tast and not let go on any accesses, and while we hurried down the rough incline he could be heard awearing lustily as he struggled to free himself from the tightening embraces of his prisoner. There he lay on his back holding the Mustang great boa, with one hand clutched about its throat. There was coll upon coil of the monster's length Liniment wound around his neck and arms and body. His legs only were free, and with these he tried vigorously to get on his feet; but in vain, for the weight around his neck and shoul-ders, as well as the pinioning of his arms, completely prevented any such action. He could only lie there helplessly on his back and kick. When we reached him he could speak no more and his face was fast growing livid, though otherwise he was conscious enough; but the pressure round his throat was too much for him. The swollen veins stood out upon his forehead and his eyes appeared bulging—evidently the snake-was strangling him, while he still kupt it clutched by the throat, for though a bon constrictor cannot crush one's ribs, he can easily squeeze a neck quite enough to choke.
