Atoms and Molecules.

If we take a piece of sugar we can crush it into the finest particles without its ceasing to be sugar. Its most impalpable fragments will retain their sweetness, their solubility in water, and will crystallize after the evaporation of the water. By the word "molecules" we designate the smallest particles into which the sugar may be reduced without changing its properties. But the molecules themselves are rather complex. We can by means of various methods divide them in their turn into simpler particles, none of which possess the properties of sugar. These particles are called atoms. Thus in a molecule of sugar there are six atoms of coal, such as we burn in our stoves; twelve atoms hydrogen gas, such as is used to fill balloons with, and six atoms of the oxygen which we inhale with the air. These three sweetest elements, when combined, make sugar. On the other hand, two atoms of hydrogen and one atom of oxygen give a molecule of water, so that we may as well say that every molecule of sugar consists of the union of six atoms of carbon and six atoms of water, which suggests even a clearer idea of the property difference between a molecule and its constituent elements. In short, a molecule of any subject is the smallest portion of that substance to which can be attributed all the physical properties of the substance, while atoms are the smallest particles in which the elements combine either with themselves or with each other, and thus the smallest quantity of matter known to possess the properties of a particular element.—New York Tribune.

Farm Laborers and Wages.

As is well known, more persons are engaged in some branch of agriculture than in any other kind of labor in the United States. For example, out of 22,735,661 persons ten years of age and over engaged in gainful occupations in 1890, 8,395,634, or more than one-third, were engaged in agriculture. Of the latter, considerably more than one-third were agricultural laborers. Statistics lately gathered by the Agricultural Department indicate that while agricultural laborers—that is, those who work for hire—are a decreasing element as compared with the entire body of agricultural workers in the United States, their wages have latterly been on the increase. It appears that farm wages by the month, by the year and by the season were higher in 1899 than they were in 1898. Estimating on the basis of the rate of wages with board a month in the year, gains ranging from 7 to 10 per cent, are reported from the States of Minnesota, Wisconsin, Washington, Michigan, North Dakota, South Dakota and Wyoming, the States being ranged in the order of the rate of increase. It is noted that in the United States as a whole wages by the month, by the year or season, both with and without board, reached their maximum in 1866 and their minimum in 1879.—Bradstreet's.

Get Rid of Cuba Quickly!

The people of the United States want no part or parcel of Cuba, and they will not have it. Good-bye to the statesmanship that tries to compass any such result. Welcome to the party that encourages or condones such betrayal of national honor! The Press has assurances from War Department officials that by next May or June the Cubans will have established their independent form of government. Let us hope and pray so. The quicker the better. And when that has been done, let the United States government lose no time in taking its hands off and spare no effort to knock in the head any annexation schemes of the lobby, whether disguised in a reciprocity cloak or the mask that "the Cubans find self-government unsatisfactory and are unable to maintain order, preserve peace and carry on the machinery of their government."

Prince Waldemar, of Denmark, who, it has been announced, is to visit the United States some time in January next, with the cruiser which he commands, is the youngest son of the venerable King Christian IX. He was born in 1858, and married, in 1885, Princess Marie of Orleans, daughter of the Duc de Chartres, and sister of the Prince Henri who died a few days ago in Tonquin.

Baron von Hellebrand, German Ambassador in Washington, is to give up his place, owing to ill health, and Baron Mumm von Schwarzenstein, now Minister at Pekin, is to take his place. Baron Mumm was secretary of the German legation in Washington before being appointed to the post at Pekin, made vacant by the assassination of Baron von Ketteler.

CASTORIA
The Kind You Have Always Bought
Buffalo, N. Y., Sept. 14—2:30 a. m.—At 2:15 o'clock this morn-

ANARCHY'S SHINING MARK!

The President of the Republic a Victim of the Assassin's Bullet!

THE CLOSING SCENE!

Mrs. McKinly Prostrated and in a Critical Condition.

Later bulletins from the President last evening betokened the worse. The physicians, according to the bulletins, while not regarding his condition anything save more serious, sent out the following: Buffalo, Sept. 13—3:30.—The President is more than holding his own since morning, and further improvement is expected. This is better than yesterday this time. Pulse 123; temperature 99.4. This, with as little permanent encouragement as it held, did give out the hope that at least for many hours, if not for days, the life of the President need not be despair of.

Then came this telegram: Buffalo—6:30 p. m.—The President's condition is such that oxygen has had to be administered, but it failed in its effect. He is rapidly dying. Secretary Cortelyou says he is now unconscious. In this condition he continued till the end came.

Buffalo, N. Y., Sept. 14.—President McKinly died this morning at 2:15. The exact cause of the President's death is not fully determined. To definitely do so an autopsy will be held this afternoon. The undertakers who were summoned were not allowed to embalm the body till after this is held. These remain will be taken to Washington in a day or two to lie in state. The interment will be where then family wishes and at Canton.

Albany, N. Y., Sept. 14.—Vice-President Roosevelt arrived this morning en route for Buffalo. He had not then taken the oath of office, but may take the oath before any justice anywhere. Through courtesy, Secretary Hay is acting President.

Buffalo, N. Y., Sept. 14.—Mrs. McKinly prostrated from care and anxiety, and stimulants have to be administered. Through the ordeal of parting with her husband she bore up wonderfully, but when the end came she swooned and has been extremely sick ever since. Senator Hanna is ill today from the strain and grief.

William McKinly was the 25th President of the United States. He was born at Niles, Ohio, January 29, 1843. He enlisted as a private at the first call for troops by Abraham Lincoln, in 1861, and served during the war. For meritorious conduct he became Captain and later Brevet Major. In 1876 he was elected to Congress and was re-elected until 1886, when he was defeated. In 1890 he was elected again and with the republican tidal wave, after re-election he was made chairman of the Ways and Means committee, which made him leader of his party. He framed and introduced the "McKinly tariff bill."

In 1891, he was elected Governor of Ohio, and re-elected in 1893. In 1896 he was nominated and elected President, after one of the most phenomenal campaigns ever experienced in the United States. In 1900 he received a re-nomination and easily defeated his same opponent.

He was shot twice on Friday, September 6th, by an anarchist named Leon Czolgosz, in the Temple of Music at the Pan-American Exposition, and the remainder of his short life is familiar to all. Buffalo, N. Y., Sept. 14—2:30 a. m.—At 2:15 o'clock this morn-

The Age's Atmosphere.

The atmosphere of an age has much to do with its health and productivity; for no man is unaffected by the air he breathes. It is true that a strong man makes his own atmosphere; but when a strong man is compelled to change the atmosphere which envelops him, he puts forth, in securing right conditions, a strength which ought to go, in its undiminished force, into his work. A clear, pure atmosphere is a kind of capitalized health upon which every man draws at will; a vitiated, de-vitalized air is a source of weakness and disease. A weak man is able to live in a bracing air, but succumbs and dies in an impure air. Of all the external influences which have to do with giving an age its character, atmosphere is perhaps the most important.

Now, atmosphere in this sense is simply the spirit of a group of men of superior force, or of a great number of men who have the same temper of mind, or who have come to take a common attitude toward the responsibilities and opportunities of life. When a number of able and forceful men are agreed upon a policy, that policy, though it have but a small minority of votes behind it, is likely in the end to prevail. If the natural leaders of our age lose faith in the ability of men to better their conditions, there will come a period of general apathy and scepticism in public affairs. Men who announce reform programmes or preach a new gospel of civic self-sacrifice will find themselves unsupported by public opinion; they will speak as if in a vacuum. Before they can really accomplish any good they must create an atmosphere of interest, zeal, and faith. It is the absence of this atmosphere in our cities that makes the rule of men like Croker possible, as it is the absence of the same atmosphere in a State which makes it possible to send such a man as Mr. Quay to the Senate of the United States. A group of faithful standards, who refuse to accept low standards of public action because they are familiar, and low types of public men because they are successful, can create the kind of atmosphere in which vicious systems and corrupt men find their opportunity for reward.

Tax Sale.

By virtue of authority vested in me by law for the collection of taxes, notice is hereby given that on Monday, September 17, 1901, beginning at 12 o'clock M., I shall, before the court house door in Tarboro, N. C., sell the following described real estate, or so much of each lot or tract as will pay the taxes due and the costs for the years mentioned with each tract or parcel of real estate:

TOWNSHIP NUMBER 1.
