ENTERED AS SECOND-CLASS MATTER AUGUST 20, 1928, AT THE POSTOFFICE
AT TRYON, N. C. UNDER THE ACT OF CONGRESS, MARCH 3, 1879

THE TRYON DAILY BULLETIN

The World's Smallest Daily Newspaper, Seth M. Vining, Editor.

Vol. 14. Est. 1-31-28

TRYON, N. C., TUESDAY JAN. 6, 1941

NEWS COMMENTATOR TO SPEAK HERE

Dr. Richard G. Stone, who is scheduled to speak at the Lanier Library on Thursday afternoon, is well known in this locality for his very interesting broadcasts over WSPA, in which he treats of current events from the standpoint of a young and up-to-the-minute expert on political economy. Dr. Stone graduated and took his Ph. D. in economics at Johns Hopkins university and heads the Economics Department at Converse college in winter and at the University of Western Maryland in summer.

Dr. Stone will speak on "The United States At War."—S. R.

Smallest Daily Newspaper Now Half-Inch Smaller

On account of the rising cost of yellow paper and a warning that it might not even be available in the future, the world's smallest daily newspaper has been changed from the yellow canary second sheets to regular white newsprint. The change will save the publisher approximately \$150 a year additional newspaper costs, due to increase in price of the yellow paper. Instead of printing the paper in sheets $8\frac{1}{2} \times 11$ inches the new size will be $8\frac{1}{2} \times 10$, which when folded make a Bulletin page 5 inches wide and $8\frac{1}{2}$ inches long—just half an inch narrower than formerly. The actual news and advertising space will be the same as only the margin of the paper has been cut. Previously the margin on the Bulletin page was wider than the Charlotte Observer or New York and Chicago papers. Even now the margin is no less than that of the big papers. Everybody must eliminate waste and in making this change the Bulletin will save in just a few months over two million square inches of newsprint. A ton of newsprint cut to the Bulletin size has just been received and it contains 324,000 sheets of paper. A few years ago this would have been a two years' supply, but now will last about five months due to the increased circulation of the paper and also to the number of papers.
