

"OUR CHILDREN"

There is nothing in this world that creates a greater or more sympathetic interest than a little child. Whether we are parents or not, we see in the small child the potential qualities of good citizenship and the future of the nation. What we are tomorrow depends upon the children of today: therefore our duty as doctors, nurses, and parents is to try to keep each child well that he may have an opportunity of making the best of life.

Communicable diseases are our biggest problem, however, most of them can be prevented through immunization. Diphtheria, whooping cough, smallpox, and typhoid fever. As a whole parents and guardians in Polk County have been very cooperative in helping to keep our county free from these diseases, but we do have some children unvaccinated—and it is to these children's parents we appeal, maybe you do not know the ages when a child should receive his immunizations—at the age of two months he should get his whooping cough vaccine, at the age of six months, diphtheria toxoid, at the age of nine to twelve months, smallpox vaccine, at two years of age typhoid vaccine.

In North Carolina in 1947 we

FOR SALE: About 250 bales of fine hay. Mostly soy bean. Some grass. See Harrison Bridgeman, Tryon, Phone 101 or 434-J.—Advertisement e.o.d. tf.
