

Home economists say there is an element of chance in washing rayon if the label carries no facts about its washability, or if the sales clerk was not too specific in giving such information. Never let your rayons become extremely soiled and never soak or boil them. Unless specifically labeled for "all-purpose" soap, use a mild soap on rayons. When there is a "go-ahead" signal for washability, very little pampering is necessary. You may, wash it by hand. But if the seams are well-finished and well tailored then there is no reason for not machine-washing it. Warm water about 105 to 110 degrees F. is very effective as most rayons clean easily.
