FARM FOLKS QUESTION

Question: I own a small farm. What type of seed cleaner do you recommend that I use?

Answer: The answer depends on conditions on the farm. If you are growing only one or two large crops for commercial seed purposes, it is recommended that you use one large cleaner. However, if you produce several types of seed crops, it is recommended that you use one large cleaner. However, if you produce several types of seed crops, it would be better for you to use several small cleaners.

Question: Is it possible to dry seed too dry for germination?

Answer: No. Tests by the Ohio Agricultural Experiment Station show that the moisture content of seed can be reduced to 5 per cent without affecting the germination of seed. However, it is possible to get seed too hot.
