

Return From Cruise

Four couples from the Tryon area have recently returned from a two week Caribbean Cruise. They are Mr. and Mrs. Malcom Wiltshire and Mr. and Mrs. John Young from Tryon, Mr. and Mrs. George Helmstetter from Landrum and Mr. and Mrs. Joseph House from Columbus.

While aboard ship they participated in the various events that were offered.

Mary Young became the Golf putting champion in the Women's division with Catherine Helmstetter as runner-up. Malcom and Jessie Wiltshire won first place in the Artistic Division on Masquerade night with John Young winning an honorable mention.

Henry C. Konrad

Henry C. Konrad, 80, of Columbus, husband of Margaret Ketels Konrad died Friday in St. Luke's Hospital.

A native of Germany, he came to the United States in 1923. He was a mechanical engineer in the Chicago area until his retirement in 1963.

Surviving besides his wife is a daughter, Mrs. Edna Danner, Falls Church, Va. and 2 grandchildren.

Memorial service will be held Saturday at 11 a. m. in McFarland Funeral Chapel with the Rev. Richard L. Jackson officiating.

Memorials may be made to the American Cancer Society.

BISHOP WEINHAUER AT GOOD SHEPHERD

The Rt. Rev. William C. Weinbauer, Bishop of the Diocese of Western North Carolina, will make an Episcopal Visitation to Good Shepherd Episcopal Church this Sunday, April 13.

The Visitation will begin with a Service of Holy Baptism and Eucharist at 4 p.m. To be baptized by the Bishop is Angela Renee Shields. In addition to presiding at the Baptism and Eucharist, Bishop Weinbauer will preach at this Service. Assisting will be the Rev. Ralph Bonacker, Pastor of Good Shepherd, and Mrs. Peggy Payne and Leonard Porter, Lay Readers.

Mrs. Ruth Moore is Chairman for a Reception for Bishop and Mrs. Weinbauer and for a covered dish supper immediately after the service.

Everyone is welcome to both the service and the reception and supper which follow.

Meets Tuesday

The Region C Employment and Training Advisory Committee will meet at 10:00 a.m. on Tuesday, April 15 in the conference room of the Isothermal Planning and Development Commission, Simpson Building, 101 West Court Street, Rutherfordton, North Carolina.

Items on the agenda include a review of the monthly Status Report, a Summary of FY 81 Plan Part I, a review of the Summer Youth Program Part II, Selection of programs to be funded in FY 81, Request for 6 percent funds.

Baseball

Friday
Jonesville at Tryon
Saturday
Polk Central at Chapman

WANTED: Someone to fix my dumb Sears tractor. Could be steady employment keeping it running. 863-2120. adv. 10, 11c.

TIPS FOR A FIRE-SAFE HOME

Fire, one of nature's greatest resources, becomes a deadly enemy when it burns out of control.

Royal Insurance and its independent agents remind you there are measures you can take to make your home safer from fire.

In order for fire to start, you must have three things: something that burns (fuel), air (specifically oxygen) and something to ignite them (heat). A home is filled with air and contains plenty of things that burn. But, a fire will not occur until a source of heat ignites them.

Overloaded electrical wiring is a source of heat which causes many home fires. Homeowners may unknowingly overload their electrical wiring when using many of today's high-powered electrical conveniences. It is a good idea to have a professional check your electrical system to make sure your wiring has been kept up-to-date with your modern appliances.

Also, whenever you purchase a new appliance, or even an extension cord, check to see that it has been listed by Underwriters Laboratories (UL) or other recognized testing laboratory. If this tag is missing, you may be purchasing a very costly bargain in the long run if it shorts out and causes a fire. Once your new major appliance arrives, have a qualified person install it, and make sure it is used properly. If, for example, instructions for an electric toaster oven say not to use it for broiling, then use the appliance accordingly.

Flammable liquids, such

as gasoline, present a danger of deadly explosion and fire. A safety container listed by UL or other recognized testing laboratory, not a glass jug or discarded plastic bottle, should be used for gasoline storage. Gasoline should not, if possible, be kept inside the home and never within reach of children.

If, in spite of your precautions, a fire still breaks out, you can slow its spreading if you have chosen the right construction materials for your home. Plaster and sheet rock walls and ceilings resist fire longer than thin plywood paneling or fiberboard. If you are adding or modernizing a room, ask your contractor or supplier about the fire rating of the materials you plan to use. This is another area where saving a few dollars may prove costly in the end.

To further protect your family by warning them of a fire while there's still time to leave the house, install smoke detectors in strategic places. Detectors are activated either by smoke, or by invisible particles that are evolved during the early stages of a fire. Whether you

install a battery-operated smoke detector or one that runs on house current, it should be listed by a nationally recognized testing laboratory.

Also, you should plan a secondary escape route, in the event your hall, foyer, or stairs have caught fire and prevent your family from leaving through the normal exit. If there are bedrooms above the first floor, you should consider obtaining chain, rope or similar escape devices. Once outside, count to make sure all family members are present. Then notify the fire department. Only then should you consider fighting the fire, if it is a small one. Never risk life for material goods.

Every homeowner should have some type of fire fighting equipment. The National Fire Protection Association recommends dry chemical fire extinguishers filled with a multipurpose extinguishing agent, such as ammonium phosphate.

Royal Insurance and its independent agents remind you that with planning and a little effort you and your family can live in a fire-safe environment.
