NOTICE TO THE PUBLIC COLIFORM BACTERIA FOUND IN DRINKING WATER

During March coliform bacteria was found in drinking water samples from the Melmont Water Co. above the limit as it appears in the "Rules Governing Public Water Supplies."

Coliform bacteria is normally found in the intestinal tract of man or other warm blooded animals and can be easily found in drinking water samples. The presence of coliform bacteria indicates that some contamination has occurred.

In an attempt to correct the cause or the contamination we have done the following:

We have disinfected the water system.

We have flushed the water lines.

Samples submitted on 4-14-80, 4-15-80 show the water to be free of coliform bacteria.

If you have questions about this notice, please contact:

Robert C. Scoggins
Melmont Water Co.
Box 1028, Tryon, N.C.
