EXTENSION NOTES

By Julie Bender, NCSU

Today's fresh peach is large and sweet, compared with the small, hard, hairy fruits that grew wild centuries ago, thanks to a half century of research by government and private botanists.

According to specialists with the North Carolina Agricultural Extension Service, the peach was among the first imported fruits to be grown in the United States.

It's believed that Spaniards sent the first seeds and trees to the New World with Columbus. By 1571 three types of peaches were growing in Mexico.

The peach spread so rapidly throughout the Americas that leading botanists in the middle 1700s taught that it was native to North America.
