

Piedmont Triad Regional Council Weatherization Assistance Program

Weatherization Overview

The Weatherization Assistance Program (WAP) helps low income, elderly, or disabled residents in Alamance, Caswell, Davidson, Forsyth, Guilford, Randolph, and Rockingham County save energy and reduce their utility bills by improving energy efficiency.

Counties We Serve

Alamance	Caswell	Davidson	
Forsyth	Guilford	Randolph	Rockingham

PTRC Welcomes Duke Energy

We are happy to be partnering with the Duke Energy Helping Home Fund to continue to serve the community and better assist our client's needs. HHF measures may include weatherization upgrades, heating and cooling replacements, appliance replacement, and health and safety upgrades to the customer's homes.

Client Accolades

The remarks given from previous clients embody the quality of service we hope to provide to all current and future residents.

"The weatherization program did a fantastic job! My utility bill has decreased and that is certainly notable. The workmanship was high quality work and was done quickly."

—Benjamin Humphrey, Winston-Salem, Forsyth County

"I was definitely satisfied with the weatherization program. The auditor was available to answer questions and was in contact throughout the entire process. The crew that worked on my home was excellent! If every job had a crew like this, there'd be some work done! No one was standing around and they were always asking what is needed and what could be done. I want people to know what a wonderful program this is, you can't beat it! There are some people out there that really need something like this to help. It keeps your house just like it should be. There was work completed that I couldn't afford but I really needed, like insulation and bath fans. I can't thank you enough!"

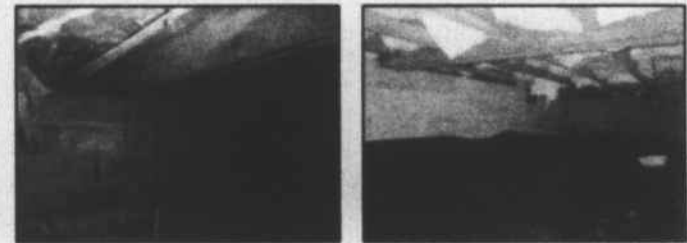

—Veronica Rousseau, Winston-Salem, Forsyth County

Examples of Completed Jobs

Many residents receive similar services. Pictured below are some examples of houses before and after work has been completed.

Addition of Attic Insulation: Increase from 3" to 11"

Addition of Floor Insulation and Vapor Barrier: Missing or deteriorated insulation is replaced with R19 fiberglass batts ground covered with vapor barrier to prevent mold and moisture.

Water Heaters are wrapped to reduce heat loss. Penetrations from plumbing, wires, and wall tops are sealed to prevent additional air leakage.
