New Year's Day.

There are three natural phenomena which afford divisions of time; First, the rotation of the earth on its axis, which gives rise to the solar day-that istence of that goodness. is the interval between the periods when the s comes to the same meridan or line drawn directly north and

south: second, the time from new moon to new moon, or from full moon until it again appears with its whole surface illuminated ; third, the revolution of the earth around the sun, causing the season and marking the period

called a year. As the time which elapses between one full moon and the next following it could be more easily observed than any other change, and this was found to be nearly equal to thirty solar days, and twelve of these
