New-Type Mounted Transplanter For The John Deere Model M Tractor

(Mounting Brackets and Barrel-Rack can be supplied for Ford and Ferguson Tractors AC & Super A)

The Ellis Transplanter can be mounted on the tractor or taken off so the tractor can be used for other purposes as quickly as a team can be hitched to the old style horse drawn transplanter.

Set plants as uniformly as the best pull-type transplanter. The Ellis Transplanter combines the uniform depth of planting and flexibility of the pull-type transplanter with the desirable advantages of a mounted implement.

The Ellis Transplanter is raised clear of the ground by the hydraulic lift so it is a fixed implement mounted on the tractor for turning, backing or transporting.

When in operation the connection between the tractor and transplanter is flexible, so the transplanter can follow the ground independent of the tractor. The depth of the runner or pressure of the covering plates is not affected by the tractor going over a ridge or into low ground.

This special feature insures uniform depth of planting, also that the soil will be properly firmed about the stems and roots of each plant.

No plants are missed with the Ellis Transplanter.
