will start construction of a big new generating plant near Wilmington next Friday morning, November 7, with an official ground-breaking The plant-which will be big enough to make more electricity than all the former Tide Water

than all the former Tide Water Power Company territory uses— will be situated on the east bank of the Cape Fear River, about five miles north of Wilmington, in New Hanover County. The site is an isolated spot long accessible only by water. The work of cutting a road into the area has begun, and rai lines will be extended to the site before the plant begins operations.

Completion of the project, which will contain the largest single generating unit in the Carolina Power & Light Company system, is scheduled for mid-1954. Materials have been on order since May 1951.

Principal speaker for the ground-breaking ceremonies will be Con-gressman F. Ertel Carlyle of Lum-berton, Representative of the sev-enth district. He will be introduced by Hargrove Bellamy of Wilming-ton, a CP&L director.

Mayor E. L. White of Wilmington will act as master of ceremonies and the 75-piece Wilmington High School junior band will play a 30-minute concert, beginning at 11 octoor.

The formal program will commence at 11:30 with an invocation spoken by the Rev. Randolph L Gregory, pastor of the First Baptist Church of Wilmington.

Louis V. Sutton of Raleigh, president of Carolina Power & Light Company, will describe the new plant and will operate a steam shovel for the ground-breaking. Appropriately, the ground to be broken will be at the edge of the Cape Fear River, from which the first unit will pump 86,400,000 gallons of water each day for cooling purposes alone. That's enough water to supply Wilmington for 16 days.

Like its water consumption, other statistics on the new unit run to phenominal figures. For example, it will produce three-quarters of a BILLION kilowatthours of electricity per year, if operated 85 per cent of the time.

It will accumulate a pile of coal worth over a million dollars to insure an uninterrupted supply of fuel. Operating at capacity, the unit will consume 15 railroad cars of coal each day, or enough to heat the average home for 128 years.

The boiler will be as high as a 17-story building, and its smoke stack will be 200 feet high.

Public officials, newspaper men, radio newsmen and civic and business leaders from the territory formerly served by the Tide Water Power Company, have been invited to attend the ceremony.

## DAILY CRYPTOQUOTE—Here's how to work it:

AXYDLBAAXR
is LONGFELLOW

One letter simply stands for another. In this example A is used for the three L's. X for the two O's, etc. Single letters, apostrophies. the length and formation of the words are all hints. Each day the code letters are different.
