phone users in adjacent rural areas. Both communities are now provided service from the Dunn central office.

Also included in the program will be a new cable from Erwin to Coats, scheduled for completion in May, 1964. The cable will enable the company to offer improved grades of service to subscribers in the Coats area. Effective with the completion of the new Erwin central office a new zone rate will be established in Coats for one, two, and fourparty services.

Additional facilities to serve new rural subscribers near Coats, as well as rearrangement of the company's lines in both Dunn and Erwin are part of the program, according to Bridgers.

The Erwin central office will be part of the Dunn exchange and the new office will be identified by the prefix 897. Telephone numbers in Dunn will retain the prefix 892. Dunn thus becomes a multi-office exchange.

"This means that all telephone numbers in Erwin and Coats must be changed when the new office is placed in service," Bridgers said.

The central office building in Erwin will be located at the intersection of old U. S. Highway 421 and State Road 1726. It will be of masonry construction and will contain about 1,700 square feet of floor space.
