GAMBLING ON FERTILIZERS

Every year about this time the cotton planter (who belongs to the church) fixes up a gamble with the weather and the farm hands and the mules and the seed and the fertilizer.

Sometimes, he bets three hundred pounds of fertilizer ingredients all mixed up at home will make a bale to the acre. Sometimes, he bets four hundred, and maybe eight hundred. He wins sometimes and loses sometimes, just like other gamblers.

The planter can't help himself about the weather and some of the other things; but, unless he is just naturally sporty and wants to bet, anyhow, he doesn't have to include fertilizers in the deal. He can fix to have his

Fertilizer a Certainty.

The only way to do this is to contract for machine mixed goods on a certain guaranteeed analysis, made by a responsible manufacturer. Then every ounce will be like every other ounce, and every single cotton plant will have a good a chance as the best stalk in the field.

Calculate for Yourself.

Suppose 400 pounds of the best brand of mixed fertilizer costs \$6.00. Suppose that under the best possible conditions you could buy all the ingredients to mix a ton \$2.00 cheaper than the manufactured article. This is ten (10) cents per huadred, or forty (40) cents an acre. Suppose, by some slight mistake in mixing, a few plants got stunted and you lost four pounds of cotton. Wouldn't your forty (40) cents be gone?

Forty Cents Per Acre

is all you can hope to save in first cost

is what might be lost. This is big odds. Better not bet that way.
