Summer is Season When Lamb Chops Come Into Their Own

THIS is the season for lamb chops.

True they are a highly acceptable meat offering at any time of the year but it is in the summer that lamb chops really come into their own.

The reason for this seasonal popularity perhaps is that we tire of salads and long for some of the substantial meat dishes, which are the backbone of winter menus. It is asking too much though, to expect the housewife to stand over a hot oven for an hour or two while a roast browns, while the thermometer outside the kitchen door soars above ninety.

Broiled lamb chops are always a happy solution. There is just enough delicious meat on a chop to satisfy the natural craving for meat and they are easily prepared. They go well with the lighter fresh vegetables and salads and, they are easily adapted to platter dinners which are always popular in hot weather.

One important point to remember in the preparation of lamb chops is that they must be properly seasoned to obtain the full flavor of the meat. As in the cooking of vegetables, a dash of sugar, along with the salt and pepper is needed to round out the seasoning. This touch of sugar is not enough to sweeten, but acts as a blending agent for the other seasoners. Here is a recipe which is worth trying.

Broiled Lamb Chops

Heat the broiler well and rub the bars with fat. Dust the chops with a mixture of 1/2 teaspoonful each of sugar and salt and a dash of pepper. Place one inch from the flame until well seared and brown, and finish cooking further from the heat. For rare chops cook only 7 to 10 minutes, longer if you like them better done. When pan broiling, heat a heavy skillet very hot, brush with fat and proceed as in broiling.

BASTARDY LAWS OF STATE MORE SEVERE

Important changes made in the law regarding illegitimate children by the 1933 General Assembly are expected to aid welfare workers in dealing with problems relating to children of this type, local welfare officials state.

Under an amendment to the statutes concerning illegitimates, the putative father of such a child must maintain it until his progeny reaches the age of ten years. If he fails to do this and the parenthood is duly established in the courts, he may be subjected to imprisonment of 6 months.

It lies within the discretion of the judges of the Superior Court to impose suspended sentences of six months upon putative fathers, in such cases, conditioned upon the maintenance of the child involved, the intent of the law being to place the relation of the parent and child in this connection upon the safe basis as the relation between parent and child in cases wherein the father and mother are married.

The new amendment removes the question of maintenance in "cut of wedlock" actions beyond the jurisdictions of magistrates, conferring power of action in this respect upon the Superior Court. Magistrates can determine question of fact and law with reference to the relationship between the parents of illegitimate children, but must bind over defendants in actions where maintenance is an issue, it is understood.

Under the former law magistrates had jurisdiction on all issues in cases of this kind and the putative fathers were required to pay a maximum of \$200 for maintenance of the child. However, defendants were able to escape any payment whatever by remaining in jail for a period of twenty days and then taking the pauper's oath.

RED SPIDER PROVES THE MOST HARMFUL OF PESTS

The small red spider, barely visible to the naked eye, playing havoc with the flower and vegetable gardens this year, says Dr. R. F. Poole, plant pathologist of the State College Agricultural Station.

This little spider is attacking for sets, field and garden plants during the present drought throughout North Carolina, and destroying foliage particularly at a time when the plant should be manufacturing substances for production next year. The spider can be detected working on the lower side of the leaf and often forms conspicuous webs. It maws the foliage and weakens the plant.

Arbor vitae, retinispora, box woods red cedar, roses, hollyhocks dahlias, violet beans, dewberries and many other plants are susceptible to the spider which causes the leaves to curl and turn yellow. Root rots, in many cases, can be attributed to this pest.

"The red spider is easily controlled," says Dr. Poole. "In yards and green houses, constant wetting of the plants will suppress its activities. Destruction of host plants, such as polk weeds will aid materially.

Dusting or spraying plants with sulphur is the most certain and economical control measure. Any fine grade of dusting sulphur and sprays composed of three pounds of any of
