The bee is famed for industry, but you show how much work the bee really does a naturalist says that to collect a pound of clover honey the bees must deprive 62,000 clover blossoms of their sweetness. To do this the 42,000 flowers must be visited by 3,150,000 bees, or, in other words, to collect his pound of honey one bee must make 3,150,000 trips to and from the hive. As bees are known to fly for miles in their quest of suitable fields of operation, it is clear that a single ounce of honey represents millions of miles of travel.
