SUBMARINE WITH FINS. AT THE GAIETY Vessal That Can Rise or Gints When Not Under Way. British unval authorities the other day examined a new submarine in-vented by H. Middleton which will sink or rise in the water at will with-out forward or backward motion.

set forward of backward motion. The new ressel is provided with two "fins" or each side as well as a pro-peller. The propeller shaft can be carred at an angle, directing the bost to port or starboard, thus doing away with the rudder. The fins are curred feactible metal plates and, like the pro-peller, are driven by electric motors running frum achuruchters. running from accumulators. These fins are able to propel the boat by their motion, making the vessel look like some large fish swimming gracefully. By bending the fins into the correct position the beat goes under and trav-els at any depth below the surface of the water. There is no "porpoise" mo-tion, as in so many submarines when running under water. The most interesting feature of the
