in the field of the North Carolina his tory will find a valuable aid in a publication issued by the department of history at Trinity college. Its title is "A Syllabus of North Caroline History," compiled by Dr. Boyd, o Trinity college, and Dr. Hamilton, of the University of North Carolina. The work consists of ninety four outlines covering all phases of the state's history down to 1876. After each outline are references to select sources and secondary authorities There is also an extensive but practi cal general bibliography and an outline for the study of local county history. Ferhaps the most distinct-ive feature of the outlines is the emphasis given to social and economical developmenes. These matters are generally neglected or slightly discussed in the stock histories of North Carolina; while about onethird of the Syllabus is given to these
Another value of the work is that
there is no general history of North
Carolina adequately covering the en.
tire period to 1876; in the Syllabus
the whole development to this year

rarebit and trying to keep on four pounds of dead people's hair?" The simple life physically for the

highest in heaith, as well as the simple life morally for the supremes spiritual riches. Frills and complex ity make for trouble in both spheres

It is one of the best signs of the times that private funds are being donated for public health work, fo the scientific prevention of disease for the teaching of the public how to live so as to avoid getting sick, and thereby get the most out of their lives and be of the greatest good to those around them.

Up to a few years ago public health work was supported only by public funds. Bequests and dona tions went to hospitals and dispen saries for the cure of sick people. No body gave any money to prevent peo ple from getting sick. But all this is charged. Behold the establishment by John D. Rockefeller of founda tions for two types of preventive work. The Rockefeller institute to research experiments in method both of preventing and curing discusse. The Hookworm commission has for its object the prevention of the sprend of hookworm.

Public Health association, John M., G'enn, d'rector of the Russel Sage foundation, to'd of the opinior By Being Constantly Supplied With co administer that fun that the prevention of preventable disease was a most promising method of improving conditions

Another interesting report was b Mr. Mibank on the purpose of the Anderson fund. Mrs. Anderson, in this foundation, specified that it wa

Andersop fund. Mrs Anderson, it this foundation, specified that it was to be used for prevention.

Ful he health work is another was to specify prevention of preventable disease.

CHOICE PROPERTY FOR SALE. I have for sale one of the best piece of realty offered in Washington for a liag time. The ground alone is worth the price asked for this valum ble property. It is located on Secondary street—lot is 48 1-2x210 feet deep fit is within three minutes walk of the business center of the city. And It is within three minutes walk of the incadache, sick monach, and fusiness center of the city. And \$5,000 can secure this real estate, the state of the state of

Valuable Work.

Students, readers and collectors in the field of the North Carolina his copy will find a valuable aid in a publication issued by the department of the morth of the continuously for many be accurately fine. or the mature leaf. Since the leaves are produced continuously for many weeks the mature ones may be removed every week of so, a process which encourages the further production of foliage and postpones the appearance of the flowering stem.—Americal Agriculturist.

SHOE MANUFACTURER PREDICTS CATTLE FAMINE

J. Harry Selz of Chicago Says United States Must Have More Cattle at Once.

Considerable interest and alarm is mani-

Carolina adequately covering the entire period to 1876; in the Svilabus the whole development to this year is outlined with ample references. It may be of interest to note that the Syllabus is being used this year in the history classess at Trinity, the university and the atate normal. It is the kind of work that will appeal to the general public.

The Simple Life—Prevention.

The Wellington Journal says "The simplest and plainest laws on health are outraged every day by the average man. Did Adam smoke? Did Eve wear a corset? Did Solomor chew tobacco? Did the children of larnel make for a beer garden after crossing the Red sea? Did Rebecer chew chocolate bonbons and ict cream and call for soda water? Suppose Eve had been laced up in a corset, worn tight shoes and hobble fig leaves, and sat up all hours of the fight eating chicken salad and Welch rarebit and trying to keep on four pounds of dead people's hair?"

The simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life physically for the frightest in health, as well as the simple life as the simple life physically for the frightest in health, as well as the simple life is the simple life is the simple life is the simple life as the simple life is the simple li

vithout giving any thought to the futur

cattle, and especially the calves, ruthlessly, without giving any thought to the future. Every farmer in this country ought to be encouraged to double, treble or quadruple his supply. In my opinion cattle raising will not only prove profitable in the next few years, but almost a nation-wide necessity. I am speaking not only from the hide end of it, but from the food supply. "If the government would pay more attention to the conservation of cattle and less in bickering about things that don't concern them, it would be a great help to the country in the end. It may sound foolish to some people if the government would pay a bounty on every head of cattle raised, but it would be better expended than for a lot of public buildings in out-of-the-way places.

"They talk about turning to South America for their supply and even Argentina, when only a few short years ano the cry went out that America could feed the world. South America cannot take care of tuem down there. Argentina has its hands tull supplying other countries. The only other large cattle raising section is Australia. England and here colonies consume this product."

SERIOUS SICKNESS

Thedford's Black-Draught.

McDuff, Va.—"I suffered for several gears," says Mrs. J. B. Whittaker, of this place, "with sick headache, and stomach trouble.

PRETTY HANGING BASKETS.

PREIIT HANGING BASKETS.

Plenty of Young Plants Should Be
Used—Mess For a L'ning.
The most unsightly part about the
average hanging basket, especially if
it has long been in private hands is
the bare sides and bottom. If such
baskets cannot well be worked over
and replanted get a handful of silps of
wandering Jew or tradescantla, punch
holes in the sides with a lead pencil
and put in the cuttings. The basket
will noon develop into a thing of beanty. When filling these moss covered
baskets plenty of young plants of lobelia, saxifrage, hen and chickens, and
the like should be freely introduced as
the basket is gradually lined with
mose and filled with soil.

The New Hydrangeas.

No flowers have of inte years been more highly improved than the hortensis type of hydrangeas. New colors and forms with immense flowers are the distinguishing features of the new types. The individual flowers are rather less than the common type unless it be true that the flower trusses and foliage have so much increased in size as to reduce the single flowers to a minimum. The foliage is also vastly larger than in older types. One new white sort has the petals frilled and fringed, and all are now in bloom.

Emeking Pestman of Korea.

A decidedly qualnt character is the Korean postman, any a writer in the Wide World. You come across these gentry in the morning, delivering the letters. They appear to recognize the dignity of their office and fuffill their duties in a very quiet and grave manner. In wet weather be done his 'raily clothes' to protect him from the heavy showers. Over his white kartan bewarns a light mackintosh, provided by a thoughtful government, while his head in covered with a waterpoof has made of oil paper. He is farther fortified against the west by an umbrelly Like most Koreans, the postman could not possibly work without his pipe, and as he atroits from house to bouse he is invariably smoking. The letters are carried in a leather satched strapped to his heich. This individual may be taken as a typical example of the physical characteristics of these interesting people. They are tall-over a head higher than the Japaness—well built and trie complexioned.
