Marvelous Aetivitie

Marveleus Activities. A dinar in a restaurant thought he would have a jote with the white, and aaked him if he had ever seen seam-age roll. "Say," said the builts." have not only seen a sausage roll, but I have seen a bicenti bez, a table spoon, a chimney aveen a chan like a nose ray, a canista dide, a faritat fance, a sword the and a wall Sower"

Will Prove It Himself.

There is no excase for using abrup and inelegant language in accusing (man of deliberate mendacity. Let his go on talking and if he is what yo think he is he will tell it on bimself.

What is Reaft

What is Hearr The professor who went five days without eating says the pain caused by starvation is simost purely im sginary. Mayle so, but the pleasure of eating is real.

The Better Quality. The man who is dependable has something on the chap who is merely brilliant.--Philadelphis Inquirer.

Try Thumb Tacks

If thumb tacks instead of ordinary backs are used to fasten white olicioth to pantry and cupboard shelf, the off-eloth may be easily removed when cleaned.

HOW TO IMPROVE LAMB CROP

Practice of Allowing Youngsters to Run With Mothers Until Breading Time Is Objectionable,

Lambs should be weaned when fr our to four and one-half months old o says Frank Kleinheins, shepheri f the University Socks, in answer o numerous inquiries upon this sub

kmasters allow the lamb to run with their mothers until breed-ing time. This Mr. Eleinheins re-gards as very objectionable for it an-noys the swee and keeps them in poor arbs as very boyecutomote or it man noys the swes and keeps them in poor condition. Moreover, at this time the sambs get but little mflk and they condition.

among set out sittle milk and they will really do better without it. When taken from their mothers, the lambs should be put on a piece of fresh pasture, which will help's a avoid much of the stomach worm

weaning time the ewes should After weaning time the ewes should be put on a scant pasture for about a week in order to dry them up quick-ly. During this period they should be unliked a few times to prevent the under from caking and as score ar they are fairly dry they ought to be placed on good pasture again, where they will put on fiesh and becomes strong and vigorous before they are bred in the fail.

bred in the fail, Early weaning and good care of the awes after the lambs are taken away enables the awes to go into winter quarters in good condition, thus aid fug winter feeding and inwiring a large drop of strong lambs in the spring.

These must be plenty or Progress sort a writer in First Progress Prost or Batt and resetation a treadom from grafts are, the m considerations. The warmth of a divide is send Supportant than the considerations in the send pro-cessity of a good, sound moot. I wave put more than firly sheep of news put more than firly sheep

¹³ Inverse put more than fifty sheep in a single shed.-More than that number will be hard, or manufit and the charges of accidents among evens with lands will be greatly increased. The ander ought to be about twice as long as its is wide and there should be ample norm for eveny admini to its down in ide, its decore without the sp-perrance of growding the place. The floor must of course be absolutely dry and vemain that way. The feeding fact whold be placed on one side of the shed and should

on one side of the shed and sh consist of a fist-bottomed trough at

hire Sheep, A-8 ullt rack, made of sists nailed about

three inches apart. Put it out far anough from the side wall so that the anough from the side wall so that the ewes may feed at it from both sides. Whare the space is not great enough to allow the fact to be built out from the walk as shares onin feed from both sides, the bottom of the fack will link to be built sharing enough to side a. 'he grain, hay, ohar, trashy bits of forms and jeares, down to the side where the sharp are feeding. This will keep the far side of the rack from filling up with moldy feed.

PREVENT ATTACK OF APHIS

Probably Most Widely Distributed of Plant Lice-Hard to Control When it Gains Headway.

When it Gains Hesdway. The little insect known as the "oat aphis" can searcely be controlled when once it has gained headway. By projer' precaution, however, serious outbreaks can be prevented. This in-sect often escapes notice, but it is probably the most widely distributed of the important, plant lice which at-tack wheat and ests, and its depreda-tions are only exceeded by those of the so-called "green bug." How the oat aphis may be combated by a de-struction of its breeding places, by cul-fund in fulletin No. 115, shortly to be issued by the "United Sintes depart

parts of water, plus one gound of soap to each 100 gallons of apray Squid, will doubless prove efficacious, providing the application is thorough.
