

Moore And Jackson Return To Operate Farmers House

Veterans In The Business, With Combined Experience Of Nearly Fifty Years, To Operate House

NEWEST HOUSE IN WHITEVILLE NOW

Experienced Warehousemen Return To Be Associated With The Farmers Warehouse Again This Year

The plant of the tobacco auctioneer, 28,000 square feet of floor space covered with 100 golden, one-cured tobacco bales, for the glad news...

Mr. Moore has been a familiar face on the Whiteville market for 13 years and has steadily developed an excellent reputation for honest and square dealing in the tobacco business.

Mr. Jackson first came to Columbus County 18 years ago when he operated a warehouse in Chadbourne. Seven years later he moved over on the Whiteville market where he has totaled up a record of over 25 years of experience in the tobacco business.

One of the greatest auctioneers that ever rattled off that spitfire chant will sing out the familiar tune at Farmers Warehouse

SHERIFFS TO MEET—Pictured above are Chatham's Sheriff G. H. Morris (left), president, and John R. Morris of Wilmington, secretary, of the Sheriff's Association of North Carolina which holds its annual convention in Elizabeth City August 13-14.

Rising Interest In Sheep In N. C.

A Demand Exceeding The Supply Of Sheep Is Given As Reason For Keen Interest In Sheep

A demand, far exceeding the supply, for commercial ewes and registered rams is indicative of a very definite increase in the interest in sheep throughout North Carolina, reports L. I. Case, Extension animal husbandman of N. C. State College.

Case said that Kentucky, one of the major lamb-producing States, is now buying about 80 percent of her ewe stock. Tennessee and Virginia are also increasing purchases of breeding sheep.

County agents are compiling lists of farmers who are interested in buying Western ewes, and registered rams from either Western North Carolina or neighboring States.

The circular lists the symptoms of the disease, both in seed beds and in the field; tells the causes of the disease and the factors affecting its development, and describes control treatments.

Three methods of treatment are listed: (1) by benzol (benzene) fumigation, (2) by paradichlorobenzol (P.D.B.) fumigation, and (3) by sprays.

The ewes are mainly coming into the Southeast from the Northwest, and are Hampshire-Rambouillet cross-breeds. They will weigh about 75 pounds at the unloading point.

Young turkeys are great foragers, so plenty of forage should be supplied them on a good range. If dry weather has ruined the range or pasture, soybeans should be planted at once.

Case also reported to county agents the sources of registered rams available at this time. He suggested that farmers interested in increasing or entering the sheep-raising business should contact their farm agent immediately.

Several Eastern North Carolina bankers have shown interest in financing the importations of Western ewes.

Bulletin Tells Of Mold Control

Report Compiled By Various Groups Should Prove Beneficial To The Farmers Of North Carolina

Blue mold is one of the most serious problems of tobacco growers of this and other states. To provide a better understanding of blue mold, also called "downy mildew," and to describe effective methods to combat it, a report has been compiled co-operatively by representatives of Duke University, the agricultural experiment stations and extension services of North Carolina, South Carolina and Virginia, and the N. C. Department of Agriculture.

This report is contained in Extension circular No. 229, entitled "Blue Mold of Tobacco and Its Control," which is available for free distribution upon request to the Agricultural Editor of State College, Raleigh.

The circular lists the symptoms of the disease, both in seed beds and in the field; tells the causes of the disease and the factors affecting its development, and describes control treatments.

Young turkeys are great foragers, so plenty of forage should be supplied them on a good range. If dry weather has ruined the range or pasture, soybeans should be planted at once.

Four inches of mash hopper space should be supplied for each poult until the tenth week; then, the space should be increased to one foot for every two turkeys as the birds near maturity.

The turkeys like to "wash their hands" before and after eating, Parrish says, and in providing a suitable "wash room" for them, a piece of wire (hay baling size) should be strung above feed hoppers so that the birds may clean their beaks.

entirely satisfactory when applied to tobacco, and therefore, new methods of procedure had to be devised. The grower should bear in mind that the methods outlined here are the best available at the present time and that if improved methods appear they will be made available.

The first outbreak of blue mold on cultivated tobacco in the United States occurred in 1921, when it was noted in Florida and Georgia. For some unknown reason it did not again attract attention until 10 years later when it reappeared in Florida and Georgia and spread rapidly into all tobacco producing states east of the Mississippi River except Wisconsin.

entirely satisfactory when applied to tobacco, and therefore, new methods of procedure had to be devised. The grower should bear in mind that the methods outlined here are the best available at the present time and that if improved methods appear they will be made available.

Gives Hints On Turkey Raising

Parrish Says That Most Turkey Growers In North Carolina Using Brooders This Year

C. F. Parrish, Extension poultryman at N. C. State College, says it's time to talk turkey and offers the following suggestions to turkey growers as a means to more satisfactory results:

Most turkey growers in this state, Parrish says following an inspection trip around the state, apparently are determined not to let this year's crop of turkeys "freeze" and are using brooders at temperatures of 110 degrees.

"Don't let the poult jam up too close in the brooders, and go the other hand, don't 'cook' them," the poultryman says, urging that the house should be opened often enough to provide plenty of fresh air.

Young turkeys are great foragers, so plenty of forage should be supplied them on a good range. If dry weather has ruined the range or pasture, soybeans should be planted at once.

Four inches of mash hopper space should be supplied for each poult until the tenth week; then, the space should be increased to one foot for every two turkeys as the birds near maturity.

The turkeys like to "wash their hands" before and after eating, Parrish says, and in providing a suitable "wash room" for them, a piece of wire (hay baling size) should be strung above feed hoppers so that the birds may clean their beaks.

entirely satisfactory when applied to tobacco, and therefore, new methods of procedure had to be devised. The grower should bear in mind that the methods outlined here are the best available at the present time and that if improved methods appear they will be made available.

Mullins Ready With 4 Sets Buyers, Twelve Warehouses

Everything Set For The Opening Of The Tobacco Market In Mullins On August 12th

THE GREATER MULLINS TOBACCO MARKET, with 12 mammoth warehouses and 4 sets of buyers, is all set for the opening next Tuesday, August 12th. Mullins warehousemen are busily engaged in completion of their organizations in anticipation of the opening on that day.

An unusually large number of buyers representing more than a dozen different tobacco companies are arriving in Mullins now with their factory personnel and will be ready on August 12 to make their bids to the sing-song chant of the auctioneers.

Mullins is the largest tobacco market in the South Carolina belt and has had this distinction for a number of years, which is due in a large part to the utmost confidence tobacco growers, who sell in Mullins, have in the Mullins warehouse. Growers know the ability of these men who have grown up in the tobacco industry and know that they will exert every effort to get top prices for every pound of tobacco placed on the warehouse floors.

Mullins warehousemen have spent their entire lives in building the Mullins market and live in the city the year 'round. They devote their full time to the advancement and strengthening of the mart, which naturally works to the advantage of the farmer selling his tobacco in Mullins.

Growers know also that the tobacco companies and warehousemen have spent a great deal of money on the Mullins market in order to give farmers the best facilities for marketing their tobacco.

There are 12 mammoth warehouses in Mullins, modern in every respect, and growers can always find space to put out their tobacco. Positively no floor space reserved on the Mullins Tobacco Market—first come first served. Mullins has the most expert auctioneers to be found in the tobacco business, auctioneers

who are so alert and well-trained that no bid is ever overlooked. Growers like the sales system used on the Mullins market, which gives each warehouse a day's sale, and farmers can tell within a few minutes when their tobacco will be sold after it is placed on the warehouse floors, and they like the smooth, orderly way in which the sales operate in spite of the huge volume of tobacco handled each season.

With the preparations that have been made in Mullins for the sale of tobacco this season, Mullins is looking forward to one of its usual splendid seasons.

The native American black walnut, prized for the fine furniture its wood makes, continues to yield the highest priced timber in the United States, reports the U. S. Department of Agriculture.

The 1940 census shows that the number of farm tenants declined slightly during the 1930-40 period, a development probably associated with the decrease of sharecroppers in the South.

C. S. Young, a demonstration farmer of the Shoal Creek section of Yancey County, has a convincing demonstration that alfalfa can be grown successfully in the county, says Farm Agent R. H. Crouse.

The celebrated pianist had been boasting all through the dinner. Finally he held up his hands dramatically and exclaimed, "These ten fingers have made me world-famous."

The bored man opposite him asked, dryly, "Pianist or pick-pocket?"

entirely satisfactory when applied to tobacco, and therefore, new methods of procedure had to be devised. The grower should bear in mind that the methods outlined here are the best available at the present time and that if improved methods appear they will be made available.

New Record "Thrills" President

President Roosevelt receives 1941 Infantile Paralysis Campaign report showing net proceeds far above all former totals. The report was presented to the President at the White House by Keith Morgan, National Chairman of the Committee for the Celebration of the President's Birthday, and Basil O'Connor, President of the National Foundation for Infantile Paralysis.

The total of \$2,104,460.53 exceeded the former high record of 1940 by 49.5% or \$697,214.79. The

campaign closed January 30th last, President Roosevelt's 59th birthday and nearly 14,000 celebrations were held throughout the land. With the President, left to right, are: Keith Morgan, D. Walker Wear, Assistant National Chairman of the Committee for the Celebration of the President's Birthday; George E. Allen, Vice-President of the National Foundation for Infantile Paralysis; James Forrestal, Vice-President of the National Foundation for Infantile Paralysis, and Basil O'Connor.
