The tobacco barn could be used to pieces. chicks each year. It would nor-long for a smoke, the gunner Greek also opened the first and then your mother spoke." mally require around eleven to twelve weeks to brood chicks to desirable broiler or fryer size. In other words, each tobacco barn could be used for brooding chicks nine months in the year and could be made to produce \$1,000 to 1,-200 of poultry meat based on the present prices of brollers. This would greatly supplement the income of many farmers. The need for more poultry meat is evidenced by the fact that we would have to expand our producin order to supply enough poultry meat (including turkey meat) to meet the needs for a minimum diet of 31 pounds of poultry meat per person in North Carolina each year. Many broilers now being consumed by Eastern North Carolina farmers are produced and processed in Piedmont North Carolina. Markets and pro-

We urge that the tobacco farmers seriously consider broiler production or commercial egg production as a means of increasing
