North Carolina has had a 10-year **POPULATION GROWTH 14%** **TELEPHONE GROWTH 163%**

A good gauge of North Carolina progress and prosperity, and of the size of the telephone job that's been done, is a comparison of population growth with telephone growth. While the number of people in North Carolina was increasing 14% in ten years, according to the census, the number of telephones jumped 163%.

A large part of this telephone growth has taken place in just the last five years. During that short time Southern Bell has built \$57,190,000 of new telephone facilities in North Carolina... more than doubled the number of telephones... nearly doubled long distance circuits and nearly tripled rural telephones.

We've spent far more to expand North Carolina telephone facilities in the last five years than we had invested in the state five years ago. And we're going right on doing our best to meet the continuing heavy demand for service in town and on the farm.

Where Money to Expand and Improve Service Comes From

It doesn't come from the money you pay us for telephone service... that money goes to pay wages, taxes and other operating costs. The money to build new facilities must come from people with money to invest. That's why the future of telephone service depends on the Company's continued ability to pay for the use of the money invested in telephone facilities.
