A GIRL HELPS

Every child has no doubt learned by heart how General Washington left his breadquarters at Valley Porge June 18-19, 1778, and marched against the British at Philadelphia and how that was the beginning of victory for the patriot army. Your history has told you, too, how the wlater of 1777-8 was one of hardship, hunger and suffering for Washington and his army. Each arm has spice and message

Each army had spies and measure gers. American citizens shut us a philadelphia sympathized w.*. V. A ingron, but could do little to het quit because the British watched them.

The American advance guard was al-ong time about halfway between Va-let Forge and Philadelphia. Major Talmadge had charge of a detachment Taimidge had charge of a deta-timent of American cavairy that ventured a near to the ementy as Germantown only seven miles from Philadelphia. Once Major Taimadge got word in a mysterious way to be on the looder for a young country girl who that (e. n. a basket of eggs into Philadelphia to sell them. Health and disease are physical condition: apon which pleasure and paid, success and failure, depend. Every individual gain increases public gain. Upon the health of its increased, increased the prosperity of a nation; by it every value is increased, every juy enchanced. To war against disease and wrong living is against disease and wrong living is to war against path, unhappiness. to war against pain, unhappiness and failure. Hundreds of lives are needlessly sacrificed in North Carolina every year simply because the general public is careless toward certain elementary principles of public bygiene and sanitation.

When we consider late statistics we are forced to believe that book-

worm disease is the most prevalent of these preventable diseases. When college students snown an in-When college atudents shown an inflection of 33 1 3 per cent; the State Mill the 42 per cent; and orphane 61 per cent is it not time to awaken to a sense of duty toward our fellow man? This peresite is now aspin git a blood and blasting the lives of thousands of people. 100 Million Dollars Worth of Shoes

These are stupendous figures, yet this is the yearly amount that the South spends for shoes. As a curiosity these figures may attract you for a minute, but the most curious thing about them is that three quarters of this money is regularly sent away from the South and the South is that much poorer for it.

You trade at a Southern shoe store. You give the dealer your money. You probably buy a western or northern made shoe. When the dealer pays his bill, this money, less a small per cent to the dealer, goes north or west and the South is that much poorer.

Keep your money at home. Let it work for better times, better wages, more factories, more work for Southern people.

Ask your dealer for The Craddock Shoe. Made in the South, by white labor, for Southern gentlemen. The best shoe value offered by any maker in the land for \$3.50 and \$4.00. Money spent for Craddock Shoes stays in the South, and pays Southern labor, Southern grocers, bakers and butchers.

It builds Southern factories, homes and schools.

We can support more and better industries. Let's each do his part.

THE SANDS OF THE SEASHORE

Did you ever try to count the sands of the seashure? Healiy it is not such s formidable task if you go about it is the right way.

Choose a smooth, dry apot some su ny day this summer and, with ample paper and pencil and a botanist's magpaper and pencil and a botanist's mag-nifying glass, get down to work. Stretch yourself out at length and level off smoothly a space about an luch square. Lay two plus, black and grains or other small objects exactly an eighth of an inch apart, then apply your glass with great precision and care. Count the number of grains that lie in a straight line between the two objects. This is the most difficult as well as the most important part of the proceedings, and too much pains can-not be taken. A difference of one grain will make a difference of millions in the later calculations. It would be more accurate to count the grains in a quarter or half luch, but there is dan-ger of losing one's place and omitting ger of losing one's place and omitting

or duplicating some.

Having obtained the count of grains in a line one-eighth of an inch los the rest of the work is multiplication. the rest of the work is multiplication. Let us say in the present instance that twenty grains were found in the eighth of an linch. Of course sand varies greatly, but this number represents good fine sand. Multiplying by 8 gires 100, the number of grains in a line a whole inch long, and squaring thisthat is, 101 multiplied by 100, we have 15,000 in a single layer one inch square. In order to get an inch cube we must again multiply by 160, and this gives 2.400,000. Just think, a very small quantity in the bollow of the hand contains nearly 2.500,000 grains! One's admiration for the wonders of nature grows tremendously, yet we have made but the beginning!

A cubic foot contains 1.728 inches, sen this is the next multiplier, and the preduct gives the astounding figures.

product gives the asteunding figure 4.313.088.000 Four billion in less that a peck. Let us now imagine a strete of sandy beach a mile long and one foot wide and deep. In this rod of sand not much larger than a sewer pipe we find there are no less than 22. pipe we find there are no less tinn 22, 173,104,640,000 grains. But our beach has width, let us say, a quarter mile, and depth, say, fifty feet, and we find in this chance stretch a total of 1,503. 024,000,240,000,000 particles. Over our and a half quintillion grains: The mind has censed to comprehend such ag-ures, and were we to add a dozen or two ciphers they would mean no more

two expanses they would mean to more to us than this trethendous sum.

Any one with a calculating bend may expand these flaures as be-pleases. One might compute the same dy coasts of the United States, the North American continent, and so on, or might compute the number of or might compute the number grains in the Desect of Sahara. T

is really no final when once a basic number has been determined. Never was a truer statement made than the one in the Bible, where it sups that the sands of the senshors would never be numbered. They nev-er will be counted by man, but the probable annalog in certain limits may be roughly determined by the method autilized above. St. Nicholas.
