

HOW TO BUD A FRUIT TREE

Raleigh, N. C. June 13.—If you want new fruit trees of a desirable variety, these may be secured by taking buds from the desired varieties and inserting them on seedling stocks or on new wood of old trees. June is the month that this is generally done because the bark slips easily. R. F. Payne, extension horticulturist for the State College and Department of Agriculture, tells about the process as follows:

"Stone fruits such as peaches, cherries, and plums are always budded. Other fruits as apples, quince, and pears may be grafted but are usually budded because it is a cheaper, quicker, easier, and simpler process.

"Shield budding is the type most used. The bud should be placed on a stock about the size of a lead pencil. This usually means one year old wood with the peach and two year wood with the apple.

"A cut should be made on the stock about 3-8 inch around the tree and another line about 1 1-2 inches long above, vertical to and dividing this horizontal cut so it will look like an inverted T.

"The buds should then be taken from present seasons growth where the leaves have been removed but part of the petiole left to be used as a handle. A cut should be made about 3-4 inch above the bud so that it will be about half way thru the stick

when it reaches the lower end of the bud. There the bark should be cut square across. Then taking hold by the petiole remove it from the stick and insert on the tree to be budded under the flaps until the lower end comes in contact with the lower part of the inverted T. Press down the edges and bind with raffia or any other good string.

"After the union is made this string should be cut to prevent binding. The top can be cut off next spring after the bud starts."

YOUTH KILLS FATHER AT JAMESTOWN

Clay Brown, 22 years old, and crippled, is held in jail without bond, at High Point on the charge of first degree murder for killing his father, Pink Brown, 50 years old, at Jamestown, last Monday evening. The tragedy is alleged to have followed a "scene" that grew out of the association of the father with women of ill repute. Brown's 13-year old daughter is said to have reproached her father for his conduct, when he attempted to choke her, and the son came to the rescue and shot his father through the heart.

Man Accidentally Shot and Killed Near Cameron

A tragedy occurred Saturday afternoon, May 31, at the home of Mr. Adkins, who lives on route 2, near Cameron, N. C., when Clifford Carlisle, a young man of sixteen, was accidentally shot and killed. The youth was in the room with another boy, a relative. They opened a suit case in which there was an automatic pistol. The Carlisle boy picked it up, when it discharged in some manner, killing him.

A huge sea monster, of the flah tribe, 32 feet long and 20 feet around the middle, and estimated to weigh more than 20,000, was landed near Jacksonville, Florida, after a days struggle, in which 50 bullets were fired into it, the first of this week.

DON'T RISK NEGLIGENCE

Don't neglect a constant backache, sharp, darting pains or urinary disorders. The danger of dropsy or Bright's disease is too serious to ignore. Use Doan's Kidney Pills as have your friends and neighbors. An Asheboro case:

Mrs. Hugh J. Burnes, N. Fayetteville St., says: "About three years ago I was suffering severely from kidney trouble. It began with pains across the small of my back and later, I had dull headaches and dizzy spells. The way my kidneys acted bothered me greatly. I finally sent for Doan's Kidney Pills and after I had used one box I was feeling better. I kept on taking Doan's until I was cured of the attack."

(Statement given January 2, 1908).

On December 15, 1921, Mrs. Burnes added: "There is nothing like Doan's Kidney Pills for me. I don't know how I would get along without them. I use Doan's every once in awhile to keep my kidneys in good order."

Price 50c. at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. Burnes had. Foster-Milburn Co., Mfrs., Buffalo, N. Y.

HAVING TROUBLES WITH YOUR ROSES

Raleigh, N. C. June 12.—Mildew on roses may be checked by dusting flowers of sulphur over the bushes and vines. The sulphur will not remove the mildew already present but it will prevent further spreading, suggests G. W. Fant, extension plant pathologist for the State College and State Department of Agriculture. He advises that the sulphur be dusted on the plants several times after blossoming this year, preferably while dew is on the plant, and then repeated next spring before blossoming. With this care the rose plants should be free from mildew by the time they begin blossoming next season.
