HOW can you tell GOOD ROOFING? We know of one that will withstand these DARING TESTS. 1. Lay a sample of Valucite State Superior Roofing on a hot surface for 12 hours. See if it will melt or dry out. Years of scorching and baking in the sun will not affect Valucite. 2. Now, lay the sample on ice for 12 hours. Then pour boiling water over it. See if the extreme sudden changes of temperature have affected its strength. Frost, sleet and temperature changes are not enemies of Valucite. 3. Stack the sample in water for 12 hours. See if, by weight, it absorbs any water. Chlorhydrate or hours of pouring rain roll off Valucite like water off a duck's back. 4. Immerse the sample in hydrochloric acid. See if it is affected in any way. Smoke, coal or chlorine gas, acid or ammonia fumes do not harm genuine Valucite. 5. Lay a burning ember on the sample. See if it sets the roofing on fire. Live sparks, flaming embers on the roof will not set a Valucite roof burning. Valucite is approved by the National Board of Fire Underwriters. 6. Lay sample on the floor; scuff it hard with your shoes. See how little of the shoe actually will come off. No service could ever be so severe on this foot-scuffing test. No other roofing is backed by such substantial tests. Don't take our word for it—prove Valucite's quality for yourself. Call us today. CALL US TODAY FOR FULL INFORMATION.
