EDITORIAL. THE SOUTH'S ONWARD

71 A 12 ( 11. The Wonderful Progress of '87

Under this heading the Baltimore Manufacturer's Record gives a history of the South's progress during the year just ended. It is

reading of such an interesting nature that we wish all our readers greater portion of our editorial space to the publication of extracts

from it:

"The record of another twelve months has been summed up, and with 1887 ends the most remarkable year, in many respects, in the history of the South. During that the prosperity and progress of that same length of time. It is not alone in the enormous industrial new enterprises, ranging from the small saw mill to the great iron and steel works, that 1887 will ever be memorable in the history of Southern industries; greater than these, so far as concerns the future progress of the South, is the interest that has been awakened among Northern and European capitalists in the vast mineral and timber wealth of that section, and their conversion to the truth that the South is destined to be the richest country in the world. Stretching from the southern boun dary of Pennsylvania to the borders of Mexico is an immense territory, the area of which is more than 500,000,000 acres. Here are almost limitless forests of virgin timber of many varieties; boundless mineral wealth that has been barely touched as yet; magnificent farming lands, that under proper cultivation will yield big returns. and a climate that can nowhere be surpassed. In her own matchless resources, the South possesses th combined advantages of almost every other country. She has barely entered upon the threslo of the glorious future that awa t her. The next ten years will wituess a development of her mater a interests that will astonish ever

In truth the record of the past year reads more like a romance than the sober facts of actual bus iness. From Maryland to Texas the progress of 1887 was well calculated to arrest the attention of new enterprises in 1886, there is ly twice as many, and in some cases a still greater increase, while the capital invested likewise ex is not confined to any one or two are doubling their capacity by the States, neither is it confined to express be and appear before the Junge of our S. most liceral in localization of new poills to run from
