rarely occurs in such work is, that the wen employed to prosecute the work, began at the same time, an equal number of workmen at each end, and when comdeted and the work measured, it was as ertained that each squad of men had lone precisely the same amount of work a exactly the same length of time.

Too much praise cannot be bestowed upon Mr. Hankins, the skillful engineer the superintended the work on this tunel. It is a cceditable job, and bespeaks or this engineer a large amount of well arned praise.
The completion of this road to Murphy

will be another prominent feature in the future. It opens a way through a see tion of Western North, Carolina wherein is most valuable farming, mineral and timber land. It opens a direct and picturesque route to Asheville where we can onnect and make the journey to the Virginias and prominent northern cities short and pleasant?
