

Raysor & Smith

Come on with your

guesses for the burn-

ing Candle. Tomorrow

is the last day

that you will be al-

lowed to guess. The

Candle will be light-

ed at 4 p. m. tomor-

row and continue to

burn until it burns

out.

Raysor & Smith

have greatly reduced

their immense stock

of Holiday Goods,

and the balance goes

today and tomorrow

regardless of the for-

mer low prices we

asked for them. Don't

buy your Presents un-

til you have exam-

ined our stock and

seen our prices.

Come one, come

all, and see the Can-

dle lighted.

RAYSOR & SMITH,

31 PATTON AVENUE,

ASHEVILLE, N. C.

SOMETHING ABOUT FOGS.

PARTICULARLY THE ASHEVILLE KIND.

A True Fog Rises From the Earth and We Have None of That Kind Here—The Benefits of Clear and Damp Weather Compared.

Relative to the dense fog which prevailed here on Monday night and Tuesday morning, a Citizen reporter consulted Dr. Karl von Ruck, who has charge of the United States signal service at this point.

"I observed the fog on Tuesday morning and I have observed it on other mornings when it was not perhaps so dense as it was then. But what are called fogs here are in reality clouds; because a real fog arises from the earth, and we know by observation that whatever we have in this shape in Asheville comes down."

"But what is a fog? It is made up of small particles of water suspended in the air. So is a mist; so is a cloud. Relatively, the same conditions produce all alike. A rapid cooling of the temperature at night near the earth's surface causes the clouds or mist to settle around us. Everybody has observed it disappear under the sun's rays. It is not dissipated as some think. It rises, seeks a cooler place in space and we see it floating above as clouds. Sometimes it is precipitated, when the conditions are favorable for that result, and does not rise. This to be thoroughly understood requires a knowledge of meteorology, the conditions of the atmosphere under which clouds form, the influences which move them, and the cause of the various disturbances witnessed. What are called fogs, arise from the earth; generally from low places, swamps, low grounds, river courses, etc. The air being cooler than the beds these places, the moisture simply rises therefrom. It is moisture and it floats or is suspended in the air—upward into space if the conditions demand it, or is precipitated."

"I do not know that fogs produce malaria. In fact, I have reason to believe that there are fewer micro-organisms in fogs, even in a malarious section, than float in a dry atmosphere, though they probably exist to a certain degree. A moist surface cannot give off micro-organisms to the air; a dry surface can, when the micro-organisms could reach the air as particles of dust. Of course, the emanations from any particularly contaminated place contain insects which may produce disease, but it is in a fog when the air is dry."

"We have no such places in Asheville, nor do I believe we have general fogs. I do not say that we never have a fog here; there may be fogs that arise at times from the river courses, but they are not general. Now, what we have here comes from above, and the density of that of Tuesday morning was no exception. It may astonish you to know that, under such atmospheric conditions as we have here, winter patients received benefits equal to that of a clearer winter. It is attributed to the climate and pure air, in the making up of which many elements enter. The daily observations at the signal station show the presence of a very large percentage of ozone, one of its elements, and, strange as it may appear, a larger percentage on some wet days than dry ones. A great many things go to make up a climate."

A CHRISTMAS TREE.

Third Grade, Orange Street School, Have a Good Time.

The third grade of the Orange street school, taking time by the forelock, had a beautiful Christmas tree yesterday. The school room was handsomely decorated with ivy, holly, mistletoe and other evergreens and pots of growing house plants.

The tree was a graceful white pine procured by the third grade boys and secured and neatly fixed by them to the floor. The manner of distributing the presents was rather unique. A hat was passed around containing slips of paper. The number on each slip called for a present from the tree numbered to correspond with the slip.

Each child received a satin satchet-bag, an ornamental blotting book, and a pen-wiper (made by the teacher) and a story book apiece. These books will be placed in the "Third Grade Private Circulating Library" after the holidays and thus be enjoyed by all.

In return, the teacher received from the pupils, various articles amounting to the school room, flower-bowls, vases, pictures, cabinets, and waste-paper baskets, as well as two boxes of French candies, which were enjoyed by all present. Only two of the entire grade were absent.

The exercises closed with the singing of Xmas songs, which under the direction of Miss Whitlock, they learn with marvelous quickness, and sing with delightful enthusiasm, sweetness, and correctness.

ALL ROADS LEAD TO ROSE.

The Meadowbrook Bounds Probably Coming to Asheville.

From a recent issue of the New York Mail and Express the following clipping is taken. The newly organized Swannanoa hunt will have to look to their laurels or Mr. Hitchcock and his bounds may beat them.

"The meeting of the Meadowbrook Hunt club tomorrow will be of considerable importance, inasmuch as it is called to consider the question of sending the club's bounds south for the winter. For several years it has been the desire of a large number of the members to pack the pack away in the winter, but heretofore they have been able to find no suitable country in which to work the animals. This year Thomas Hitchcock, jr., expects to spend the winter at Asheville, N. C., and as the country there is well adapted for hunting, it was proposed to take advantage of the opportunity and let the pack go with him. Some members of the club, however, think that the bounds ought to be kept at home, where all the members can use them. It is to discuss and settle this matter the special meeting has been called. Inasmuch as the pack is large, it is likely that a compromise will be reached, and the pack divided, part being sent to Asheville with Mr. Hitchcock, and part left here at the kennels."

CHRISTMAS AT VICTORIA.

Exercises to Take Place in Asheville's Southern Suburb.

The holiday season will be inaugurated by a Christmas tree and interesting exercises in memorial chapel by the day school of Misses Dwight and Van Voorhis on Wednesday next at 2 p. m.

The Christmas exercises of the Home Industrial school and presentation of gifts from the Christmas tree will take place on Thursday night at the chapel, commencing at 7 p. m.

There will be a tree for the Oakland colored Sunday school in the new chapel, recently erected under the supervision of Rev. Dr. Erdman on Thursday at 4 p. m.

No better gifts can be found than solid substantial furniture. The giver is always in mind and the recipient has something of practical value. The finest display of furniture and carpet is to be seen at Williamson & Co., Patton avenue. See their advertisement.

Buy your mother, wife or sister one of those handsome rockers at Williamson & Co. They are giving a special Christmas price on them.

AROUND TOWN.

Forecast till 8 a. m. Friday—Showers, followed by clearing weather slightly cooler; south-westerly winds.

Walter E. Moore, of the Webster bar, is in the city.

Dr. J. W. Rollings has gone to Lancaster, S. C., for the holidays.

G. W. Callahan, a prominent Knoxville contractor, is in the city today.

Miss Lillie Belote has returned from a visit to Washington and Norfolk.

At Grant's pharmacy at 2 p. m. today the thermometer registered 58°.

Capt. Nat Atkinson has gone to Raleigh, to be absent about a week.

Robert Troy, a University of Tennessee student, is at home for the holidays.

Internal revenue collections for the Fifth district yesterday were \$6,020.72.

All the leading hotels will have elaborate menus for their Christmas dinners.

Gen. E. R. Hampton, of Sylva, is on a visit to friends and relatives in Asheville.

J. R. Taylor, of Asheville, and Miss Zora Wells, of Leicester, were married this morning.

Congressman Crawford has had the name of Pescud postoffice changed to Therman, N. C.

Miss Ella Smathers, of Turnpike, is raising her sister, Mrs. W. O. Muller, on Charlotte street.

E. P. McKissick, manager of the Battery Park hotel, returned from Union, S. C., yesterday.

Kenilworth Inn will have lunch tomorrow from 1 to 2 o'clock and Christmas dinner from 6 to 8.

Mr. and Mrs. S. G. Bonis and family have gone to Winston to spend the holidays with friends there.

Lloyd Freeman, the artist, leaves today for Knoxville, his old home, where he will spend the holidays.

Hon. W. T. Crawford will spend a quiet Christmas at Washington answering his heavy correspondence.

"I do not know that fogs produce malaria. In fact, I have reason to believe that there are fewer micro-organisms in fogs, even in a malarious section, than float in a dry atmosphere, though they probably exist to a certain degree. A moist surface cannot give off micro-organisms to the air; a dry surface can, when the micro-organisms could reach the air as particles of dust. Of course, the emanations from any particularly contaminated place contain insects which may produce disease, but it is in a fog when the air is dry."

"We have no such places in Asheville, nor do I believe we have general fogs. I do not say that we never have a fog here; there may be fogs that arise at times from the river courses, but they are not general. Now, what we have here comes from above, and the density of that of Tuesday morning was no exception. It may astonish you to know that, under such atmospheric conditions as we have here, winter patients received benefits equal to that of a clearer winter. In fact, I have reason to believe that there are fewer micro-organisms in fogs, even in a malarious section, than float in a dry atmosphere, though they probably exist to a certain degree. A moist surface cannot give off micro-organisms to the air; a dry surface can, when the micro-organisms could reach the air as particles of dust. Of course, the emanations from any particularly contaminated place contain insects which may produce disease, but it is in a fog when the air is dry."

"We have no such places in Asheville, nor do I believe we have general fogs. I do not say that we never have a fog here; there may be fogs that arise at times from the river courses, but they are not general. Now, what we have here comes from above, and the density of that of Tuesday morning was no exception. It may astonish you to know that, under such atmospheric conditions as we have here, winter patients received benefits equal to that of a clearer winter. It is attributed to the climate and pure air, in the making up of which many elements enter. The daily observations at the signal station show the presence of a very large percentage of ozone, one of its elements, and, strange as it may appear, a larger percentage on some wet days than dry ones. A great many things go to make up a climate."
