TO CHICAGO BY BOAT.

Novel Trip to be Taken by Three Asheville Men.

From Asheville to the World's Fair by boat! How does that strike the reader

of THE CITIZEN? Yet that is the trip which a trio of Asheville young men are to take. The adventurers are Messrs. W. H. Vaughan, G. W. Vaughan and James Sorrells. The boat to be used was made in this city, and can now be seen in the building on and can now be seen in the building on West College street, in rear of the Grand opera house. It is sixteen feet long, three feet wide and weighs 400 pounds. It has side wheels, with eight paddles each, which will be worked by a pulley. A tent has been constructed for the boat, of 16-ounce ducking, and a stove will serve to make the craft comfortable in the coldest weather. The boat has been christened the "Swannanoa," and is painted white, with borders noa," and is painted white, with borders

The voyagers will carry a bird dog, shotguns and pistols, with ammunition for hunting. The days will be put in on the water and the trio will camp out at night. When provisions run low a few days will be spent on the shore hunting,

until the locker is replenished.

The trip is to be made by way of the French Broad, Holston, Tennessee, Ohio and Illinois rivers and the Illinois canal. The boat will be launched here as soon as the weather moderates and the distance will be covered by easy stages, the voyagers expecting to reach Chicago be-fore North Carolina day, August 28, at the World's Fair. The boat will probably be exhibited at the Fair.

The young men are elated over the

prospects of the trip, and expect to have plenty of fun on their long water junket.

A MORNING PAPER

An Association May Start One Asheville Soon.

A movement is now on foot, which has not fully developed as yet, looking to the establishment of a morning paper in Asheville. The matter is now in such a shape that nothing of a definite nature can be given.

It is known, however, that negotiations are now pending, which, if brought to a successful culmination, will result in the purchase of the presses and type of the Asheville Banner, which paper has

The new paper, it established, will be issued every morning of the week. Mon-days excepted, and may take the Southern Associated Press dispatches. The editor will be Fred. R. Tiffany, originally of Connecticut, but more recently

The paper will be owned by an association of Asheville men, with, it is under-stood, Mayor Chas. D. Blanton at its head. The members of the association are to hold a meeting soon, at which the matters prelimiary to the starting of the paper are expected to be made. The paper will be Democratic.

RUNAWAY CAR

Early Morning Race Down South Main Street.

A slick street car track on the South Main street grade below the car shed car started at the usual speed, but its pace began to quicken, and Motorman Phil. Williams and Conductor Millican applied the brakes, but it did no good, and the runaway car and assistant commissioner for the United States at the Paris exposition in 1889. could not be checked until it struck the switch at the Goodlake curve.

There were several passengers on the car, but none of them were hurt. The damage to the car was insignificant, and it was soon making regular trips.

THIS EVENING

The Meeting of Citizens in the Court House at 7:30.

Every citizen of Asheville will be deeply interested in the work to be done in the court house this evening, at the meeting discussed specially, and other matters affecting the city will come up.

Every citizen who takes an interest in

this matter is requested to attend the meeting this evening. Listen for the ringing of the bell.

"KEM-KOM" Is a chemical compound, harmless in every respect, and perfectly simple in its application. It is a powder which is dissolved in water, and this solution sprinkled

This material is for use on either hard or soft coal, in the boiler furnace, stove Saves 25 per cent. of the coal; also labor time and dirt; destroys the deadly coal gas which often permeates the home, producing diphtheria and all kinds of masal

and membranous diseases, thus insuring health and pure air in the homes, school-houses, and all places where coal is used. Coal treated with Kem-Kom ignites quickly, lasts longer, and gives out intense heat. Starts a vigorous fire in one fourth of the time it takes without Kem-Kom.

Largely lessens the ashes, prevents clinkers and cinders, burns the soot and a large portion of the smoke, thus keeping the flues free from dirt.

With Kem-Kom an inferior coal, such as screenings, can be mixed with the ordinary coal, and a still greater economy effected.
