waving and calling to young women and waving and calling to young women on the campus.

It was an interesting case because of Judge Collins' views toward mashers, as shown in his treatment of men who have accousted women on the streets here. A man from Ashboro, Bascomb Smith, was last week sentenced by Judge Collins to serve aix months on the Guilford County roads because he asked a young married woman whether he knew her and further back a masher who was soundly beaten by a young woman's husband for advances to her received a sentence. Judge Collins complimenting the husband for beating the fellow

The cases were prosecuted by J. M. Sink, a special o cer at the college.

The judge holds, however, that it the girls smith there is no itaw against speaking to them.

Look Next Week

See how teeth glisten when the film goes Note what beauty you have gained

For your sake and your family's sake, start making this test today. Then look next week and see the changes that occur.

Millions of people of fifty nations are now brushing teeth in this new way. Dentists everywhere are urging them to do it. You can see the results wherever you look-in teeth that glisten as they never did before.

Now see them on your own teeth. Go get this free tube at your store.

Film makes teeth dingy

You feel on your teeth a viscous film. It clings to teeth, gets between the teeth and stays. Food stains, etc., cloud that film. Then it forms a thin dingy coat. Film is also the basis of tartar.

The ordinary tooth paste leaves much of that film intact. Thus most people's teeth, until lately, were clouded more or less. Beautiful teeth were less common.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

Most tooth troubles are now traced to film. And, despite the tooth brush, they became almost universal.

Now millions combat it

Dental science has, for long, sought ways to fight that film. Two effective methods have been found. Able authorities, by careful tests, proved them beyond question Now millions of people are using them daily, largely by dental advice.

One method acts to curdle film, the other to remove it. And this is done without the use of any harmful scouring agent.

A new-type tooth paste has been created, based on modern research. It includes some new essentials and avoids some old mistakes. The name is Pepsodent. These two great film combatants are embodied in it.

Some Pepsodent effects

eFilm coats are more readily combated. The teeth become highly polished, so film loss easily adheres.

Pepsodent also multiplies the starch di-gestant in the saliva. That is there to digest starch deposits which may otherwise ferment and form acids.

It multiplies the alkalinity of the saliva. That is there to neutralize the acids which

Thus Nature's great tooth-protecting agents are given manifold effect, while soap-and-chalk pastes reduce their power.

These results are bringing a new dental era in millions of homes the world over. And these whiter, safer, cleaner teeth mean life-long benefits. When you find them out, you will want your people to enjoy them.

They use it

The dainty people you see, who show white teeth, are probably users of Pepsodent. You see them everywhere. To women it means new beauty, new charm; to men new cleanliness. To children it means new protection against troubles you have had.

Present the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats dis-

A few days will convince you that this is a method seential to you and yours. Cut out the coupon so you essential to y won't forget.
