

USE GOOD SUGAR FOR GOOD JAMS AND JELLIES

Buying in Cotton Bags Assures Purity and Full Weight

In buying their sugar for canning and preserving this Summer, Southern women should be particular to buy it in the 25, 10 or 5-pound cotton bags in which it is packed at the refinery.

There are many good reasons for this, the first being that she knows exactly what brand of sugar she is getting, and can tell whether or not it is sugar that has been refined in this country under the strict United States sanitary conditions, by American labor, under the NRA code—or whether it is foreign refined sugar. The cotton bag also keeps the sugar in the same pure, clean state in which it left the refinery.

In addition, when she buys sugar in a cotton bag, she is stimulating the consumption of cotton—the crop upon which the prosperity of the agricultural South largely depends. The Savannah Sugar Refinery at Savannah, Ga., (refiners of Dixie Crystals Sugar) alone uses 10,000,000 yards of cotton cloth a year in packing their sugars.

Put up plenty of fruits this summer for use this winter. The price of canned goods, jellies, etc., has gone up materially in recent months, and is predicted that their price will go even higher. The more you can buy this summer, the more you will save on your food bill next winter.

WIDER TREAD OF FLATTER CONTOUR

MORE TOUGHER RUBBER

GUM-DIPPED HIGH STRETCH CORDS

DEEPER NON-SKID

MORE THAN 50% LONGER NON-SKID MILEAGE

SAFEST TIRE FIRESTONE EVER BUILT

THE New Firestone High Speed Tire for 1934 was built to give you the same dependable service it provided for the 33 drivers who started in the torturous 500-mile grind at Indianapolis May 30.

This new tire has a wider tread of flatter contour, deeper non-skid, more and tougher rubber, giving you more than 50% longer non-skid mileage.

Besides being Safety Protected on the outside it is Safety Protected on the inside. Eight additional pounds of pure rubber are absorbed by every one hundred pounds of cords.

This additional rubber is so placed that it surrounds every cotton fiber inside every cord in every ply. This is accomplished by soaking the cords in liquid rubber by a Firestone patented process. This patented process, Gum-Dipping, is not used in any other tire built.

Heat caused by internal friction of cotton fibers destroys tires—causes separation and blowouts.

Gum-Dipping counteracts friction and heat—provides greater adhesion and binds the cotton and rubber together into one cohesive unit of greater strength, assuring car owners of the greatest Safety, Protection and Economy that it is possible for human ingenuity to build into a tire.

The most amazing proof of this extra strength, safety and dependability is the fact that everyone of the 33 drivers at Indianapolis chose and bought Firestone High Speed Tires. Race drivers KNOW tire construction—they will not risk their lives or chance of victory on any other than Firestone.

At terrific speeds the cars plunge into the treacherous turns—tires are braced against the scorching brick track—so hot the tires fairly smoke at times—they give—yield and stretch—every conceivable force works to tear the tire to pieces, yet Firestone High Speed Tires "come back" on the straightaways. Not once during the entire race did a tire fail.

Surely this is the most amazing proof ever known of Extra Strength, SAFETY and dependability. Call on the Firestone Service Dealer or Service Store nearest you TODAY. Equip your car with New Firestone High Speed Tires for 1934.
