Transylvania's County Agent Issues Warning On Spraying

Ill Affects Of Insecticides To Man Cited. Rules Are Listed

"Dusting or spraying with insecticides will do much to promote the healthy growth of fruits and vegetables," says Julian Glazener, Transylvania county agent for the State College Extension Service. But insecticides often have just the opposite effect on man. Even though the container may not bear the skull and crossbones label, caution is necessary since many substances are harmful in some way to man, despite the fact that they may not definitely be poisons.

The National Safety Council points out that special precautions should be taken to avoid inhaling fumes or vapors from fumigants, which, if not poisonous, will usually prove irritating to humans. Special emphasis should also be placed on the necessity of proper labeling for all insecticides and safe storage where children cannot reach them.

Simple precaution is the most important thing to remember in the safe use of insecticides. The following are a few rules which point out the most important things to remember:

1. Follow the directions of the

manufacturer in handling, mixing and applying.

2. Always—Spray or dust with the wind.
3. Wear respirators when there is danger of inhaling fumes. Only those approved by the U. S. Bureau of Mines for the particular job you are doing should be worn.
4. Gloves, long-sleeved shirts and clothing to cover the entire body are recommended.
5. Wash hands and other exposed parts of the body thoroughly with soap and water after using poisonous chemicals.
6. Store poisonous materials in strong leak-proof containers. Be certain that they are out of reach of children or livestock. Bury unused portions.
7. Thoroughly wash fruits and vegetables to which poisonous chemicals have been applied.

A friend and her four-year-old brother were visiting at my grandfather's farm. While sight-seeing in the country, little Bill said, "Gee, you must be rich out here." He pointed to a lightning rod on top of a barn and gasped, "Even the cows have TV sets!"

BEEF PLENTIFUL, GLAZENER SAYS

Record Numbers Of Cattle Coming To Market. Suggestion On Buying Given

Beef is abundant—the top item on the U. S. Department of Agriculture's April and May list of plentiful foods—and Julian Glazener, Transylvania county agent for the State College Extension Service, reports consumer will find it one of the best meat buys on the market.

Record numbers of cattle coming to market have brought beef prices in recent weeks to the lowest point in many years, Mr. Glazener points out. This high production of beef, coupled with the lower prices, have earned beef a spot on USDA's plentiful foods list for the first time in the history of the program.

When buying fresh beef, Mr. Glazener cautioned that it should be stored, loosely covered, in the coldest part of the refrigerator and should be used within a few days. Variety meats such as liver are especially perishable and should be used within two days, while ground beef, unless frozen, should be held only one day, he explained.

Sharing honors with beef on the April and May plentiful foods list are cabbage, tomato juice, celery, Irish potatoes, dry lima and navy beans, broilers and fryers, turkeys, frozen fish, eggs, dairy products, edible fats and oils, peanuts and peanut butter, raisins, and fresh and processed citrus.

"GARDEN TIME"

—By— ROBERT SCHMIDT

In some parts of the state the transplanting of warm season plants has already begun but for the most part there is still danger of killing frosts. Where frosts may still be expected, plants can be set and protected with hot caps for two or three weeks. Hotcaps made of oiled paper may be purchased at most seed stores and are very effective in protecting tomato, pepper, eggplant and melon plants from cold weather and frost. They also furnish protection from insects while the plant is starting growth. The use of hotcaps will often bring tomatoes and melons in about ten days earlier than unprotected plants. It is important to remove the hotcaps as soon as the need for protection is past.

At transplanting time it is also timely to discuss the use of "start-

Mackey Reports Cottonseed Meal Offered For Sale

Edward H. Mackey, chairman of the Transylvania county PMA committee announced today that the Commodity Credit Corporation has stocks of cottonseed meal for sale. This meal may be obtained from the PMA commodity office in 20 ton lots for \$73.00 per ton, plus the cost of bags which is about \$3.70 per ton. The price quoted is for 41 per cent protein meal, whereas the 36 per cent protein is available at a discount of \$5.00 per ton.

Transylvania's FHA Supervisor Says Progress Is Being Made

Many Approved Practices To Produce Greater Yields Are Carried Out

Transylvania county farmers cooperating in the program of the Farmers Home administration are following plans to produce more efficiently on their farms this year, Wallace G. Flynt, FHA supervisor, reports.

They are working to improve the organization and management of their business so they can earn an adequate living and pay back what they borrow. To do this, they will follow approved practices to further step up yields per acre and production per animal, and eliminate all possible expenses by producing their own food and feed.

er" solutions. There are several of these materials offered for sale. They are usually made up of salts containing nitrogen, phosphorus and potash that are easily soluble in water. The manufacturer's directions for use should be followed. A starter solution can be made at home by dissolving one pound of a good garden fertilizer such as 6-8-4 or 8-8-8 in five gallons of water and using one-half pint of this solution to water each plant when transplanted. Starter solutions have been found to be very efficient in giving the plants a quick start. They are to be used in addition to the regular fertilizer application.

able at a discount of \$5.00 per ton. Mr. Mackey says this cottonseed meal has been acquired by the Commodity Credit Corporation as a part of the 1952 cottonseed price support program. It is stored at Charlotte, Raleigh, Raeford, Goldsboro, Monroe, Tarboro, Wilson, Gastonia, and at points in other states.

Farmers or others interested in obtaining this cottonseed meal may do so by contacting Mr. F. P. Egger, director, PMA Commodity Office, 120 Marais street, Wirth building, New Orleans, La.

For example, they will try to buy fewer groceries and raise a corn crop for less cost.

The families will be visited and kept posted on the latest methods recommended for crops and livestock. They will also be advised on actual needs for additional machinery and household equipment, and on making good buys when they purchase. Each borrower will be urged to get only supplies and machinery which contribute directly to better production.

Among the farm methods to be stressed by families this year are: Using the right kinds of seed, fertilizing properly, controlling insects and disease, checking weeds, developing better pastures, keeping good breeding stock, and timely marketing.

The two most important practices for Transylvania county will be: 1. Developing pastures and expanding livestock enterprises and 2. Adding sheep or poultry.

Farmers who receive supervised credit are expected to have the land and labor resources essential for successful farming, and to follow a sound plan for making the most of them.

The Farmers Home administration makes loans to families who cannot get adequate credit elsewhere on reasonable terms to own and operate farms, and accompanies these loans with guidance in good farm and home practices.

REPORT OF CONDITION OF TRANSYLVANIA TRUST COMPANY

Of Brevard, in the State of North Carolina at the close of business on April 20th, 1953
