Ships Still the Need

The suggestion that probably the Germans are leading us into a trap by allowing us to get large numbers of men across the water and then try to cut these men off from American food and supplies by submarine activity is suggested by Lord Northcliffe. The Manufacturers Record, writing on that point says:

Lord Northcliffe in a trip through the west has a number of speeches and interviews stressed the great importance of building ships, and ships, and more ships. Upon our Boston." Every vice, crime, our ability to provide shipping to and oppression in any community maintain our own army in Europe is a menace to the whole community as well as to aid the allies. depends our ability to win this war.

According to Lord Northcliffe—and we believe he is quite correct—this country should place no confidence whatever in any reports that come from Germany about that country being weakened by the war, about its being short of food, or anything else which would indicate a lessened ability to maintain the war. Lord Northcliffe says, as we have often said before, that all of this stuff put out by Germany for the express purpose of deceiving the United States. According to his view, the great problem before us is that of transportation across the ocean, and he believes that Germany will wait until we have made a considerable army in France and then by submarine activity undertake to cut off our supplies and make it impossible for us to feed or munition our army, which would make us a great deal weaker than if we had no army abroad.

This is one of the problems we must face—Durham Herald.

The brewers are German. Approximately 65 per cent of the saloonkeepers are German. Papers which combine anti-Americanism and anti-prohibition are almost always German or pro-German.

The submarines are destroying about 8,000,000 bushels of grain a year. The beer trade is destroying 70,000,000 bushels annually. As a grain-destroyer the Kaiser must prefer the beer trade to the submarines, and his faithful friends in America could not allow that trade to perish. If the brewing industry were destroyed, the German propaganda and espionage agencies would go to pieces over night and the Berlin government couldn't permit that.

Governor Bickett hit the nail on the head with a sled-clubmer when, in a recent address to the State Medical School Inspectors, he declared: "It has been said that it is more of a disgrace for a man to go to the hospital than to jail. To make it necessary to have to go to the hospital the man must break the laws of God. Health laws are God's laws. To go to jail he must break only man's laws—State Journal.

If Russia does not intend to fight any longer, the next best thing she can do is to remain in such a state of anarchy that the German army won't dare to leave, for fear that the anarchists might get together and cause more trouble in East Prussia. Those who are disposed to abuse the Russians for their demoralization should remember that they put in some mighty good licks during the first two years of the war when they kept the eastern line busy. Had it not been for the early activities of the Russians when the German army plunged across Belgium to France, they would have captured Paris—Wilmington Star.

What World War Means

Dr. George T. Winston.

The significance of the World War lies in the manifest interdependence of all the nations of the earth; not only industries and commerce, but also in ideals, principles and systems of government and ethics.

Universal education and free opportunities and necessary foundations for democracy. Universal democracy is the only safeguard of the world, and "darkest Africa" is a menace to "bright" ships, and still more ships. Upon our Boston." Every vice, crime, our ability to provide shipping to and oppression in any community maintain our own army in Europe is a menace to the whole community as well as to aid the allies. depends our ability to win this war.

Sugar Prices

Business is not yielding gracefully in every instance to the demands of the Food Administration. Mr. Hoover has had for example to send rather sharp message to about 150 licensed sugar manufacturers in Louisiana to prevent them from avoiding the acceptance of the price for sugar as fixed by the Government, by putting the product through a semi-refining process and selling it to the candy and sweet drink manufacturers at a high figure.

Much of the many thousands of acre of woodlots in North Carolina could be cleared of waste wood at a profit this year and be improved in addition. Some trees are old and decrepit, and others are spreading and bushy in growth. Useless themselves for lumber, they crowd out thrifty young trees or prevent seedlings from starting. When such wood trees are removed young seedling spring up naturally and soon grow into timber of value.

A net profit of almost \$2.00 per cord was secured by one woodlot owner last winter. Where the market is near, and good roads exist the cost of marketing is very little leaving a good margin for profit on the enterprise.

New York, Nov. 15.—The New York Tribune prints this morning a dispatch from Arthur S. Draper, its London correspondent saying in part:

"The German peace terms are expected to be made public within a few weeks. It is unlikely that any armistice will be arranged but something akin to it might be considered. This is the view not only of pacifists, but of those who recognize that the last few months have brought an amazing change in the whole war situation."

"Do You Bit"

We are saving the Automobile Users more Money than any one else by repairing their Tires in a strictly scientific way, at the lowest cost.

We sell Auto Tires and accessories, and the quality and prices will please you. Our Experience at your service, or suggestions may save you many dollars.

Raleigh, N. C. November 16—Thousands of dollars spent for coal in North Carolina could be saved and farm woodlots could be improved at the same time if the farmers of North Carolina would supplement with the coal used for various purposes, according to information furnished by the Agricultural Extension Service of the College and Department of Agriculture.

In many of the woodlots there is considerable waste fine wood, dead trees, and different kinds of other underbrush that we might call "weed" trees which could be used for pipe wood, and when two pounds of seasoned wood is approximately equal to one pound of coal in heating value, this would mean a considerable saving in coal. Quite a few cities in the State have already taken notice of this fact by establishing municipal wood yards encouraging the selling and buying of this commodity.

The Ohio Experiment Station has found that a cord of wood equals in fuel value to a ton of coal.

Owners of wood lots can easily cut enough fuel for themselves and even supply the same to local markets through the winter and will put their spare time to good advantage, as well as the time of their hired men who probably have a lot of extra idle time on their hands. In this way they might make a profit for themselves, as well as use a lot of wood that is now wasting away and which might displace much higher price coal.

A Case of Laziness.

Aleck Smart is a traveling salesman. His line is, well, say fountain pens. He hires a boy to tote his samples case. He never walks a block if there is a conveyance handy. His traveling companions say Aleck has lost his old time "pep." His employers say Aleck can't stand prosperity, that he is getting just plumb lazy. They are afraid it isn't a case for a doctor. And Aleck is not yet middle-aged.

"Me!" says Aleck. "Gwan, don't kid a hard working man. Never saw a sick day in my life, honest! Kind and true and—maybe that is the trouble—I stand without breathing. Nah, nothing wrong with me. Simply sum' luck, the jazz. I've been running up against the last year or so."

Big fellow, high-munched, half-necked, close-shaved, thick bosomed, well-dressed fellow, double chin, baggy eyes bulging slightly, gait from walk

Posture and Health.

Good or bad posture is largely a matter of habit, yet a faulty posture is a strain upon endurance and a sure factor of poor health. Young men entering U. S. Army training camps or military schools are early introduced to the habit of maintaining a good posture.

It has been found by actual X-ray observation that an individual may lift the stomach and transverse colon from two to six inches, when these organs are pleased oraggling, by simply assuming a good erect posture with chest high, chin in, crown of head high—as though endeavoring to reach an imaginary ceiling with it, abdomen drawn in and up.

Sagging of stomach and colon are now recognized as common factors of normal digestive disturbances and ill health.

Man's upright posture brings with it a numerous benefit of major and minor life which the lower animals escape. But these troubles (from viscerosis or sagging of abdominal organs) are not due to upright posture. It is true that certain individuals have
