

PE-RU-NA STRENGTHENS THE ENTIRE SYSTEM.

Mr. Chas. L. Sauer, Grand Scribe, Grand Encampment I. O. O. F. of Texas, and Assistant City Auditor, writes from the City Hall, San Antonio, Tex.:

'Nearly two years ago I accepted a position as secretary and treasurer with one of the leading dry goods establishments of Galveston, Tex.

The sudden change from a high and dry altitude to sea level proved too much for me and I became afflicted with catarrh and cold in the head, and general debility to such an extent as to almost incapacitate me for attending to my duties.

"I was induced to try Pe-ru-na, and after taking several bottles in small doses I am pleased to say that 1 was entirely restored to my normal condition and have ever since recomm-nded the use of Peruna to my friends."

Facts About Plant Food. Manufacturers of fertilizers make a

great mystery of the art of mixing the various ingredients that go to fill up their 200-pound sacks, writes E. M. Post. They tell the farmer that it is necessary to have skilled labor and high-priced machinery to effect a perfect mixture, but a few experiments will soon convince any farmer that he can easily equal the best efforts of the factories and save a substantial sum on each ton. The process is very simple. The farmer empties on the floor of the barn the sacks of the various materials he is about to use, spreads them in alternate layers in a pile, shovels the whole over and under thoroughly for fifteen minutes, throws the result through a screen, sacks it up again, and he is ready to apply it to his land.

Screens are easily made and are extremely useful; they reduce the chemicals, etc., to a perfect form for drilling, besides insuring a thorough mixture. A strip of heavy wire cloth, four holes to the inch, is nailed to half-inch boards, making a sieve three feet wide by five feet long.

Say a farmer wants to apply to each acre of cotton 500 pounds of 8-3-3 goods, and instead of paying from \$25 to \$28 to a dealer, he wants to mix it himself. He pours on the barn floor in front of the sieve a sack of sixteen per cent. acid phosphate, two sacks of cottonseed meal and half a sack of kainit. Acid phosphate will cost him about \$15 a ton; meal he will probably have on his farm, but we must reckon it at \$25 per ton; kainit will cost \$12.50 a ton. So a ton of fertilizer made according to this, a common formula in the cotton regions, will cost him \$18.50, a saving of from \$7 to \$10 over the

meal. The cobs have little if any nutritive value, it is true, but corn meal is a heavy, concentrated food, and when fed in large quantities it is often not thoroughly digested and assimilated by Landsberg in the New York Evening live stock. The benefit from grinding the cobs with the meal is thought to be due to the lightening of the meal somewhat, enabling it to be completely digested and resorbed.

Our experience briefly summed up is about as follows: A bushel of corn and cobs weighs about seventy pounds; a bushel of corn fifty-six pounds. By grinding the corn and cob, therefore, we have added practically one-fifth to the feeding value of a bushel of corn meal. This is an item to be carefully considered in all sections of the country where corn is high priced .- Knoxville Journal and Tribune.

Succotash.

The American Indian gave to the world a dish composed of green corn and beans variously compounded, and its name was, and is, succotash. More recently our agricultural and live stock experimenters have utilized this name for mixed feeds for live stock, and fed to them green. Corn, pease, oats and barley were sown together with satisfactory results in the way of food, but produced no second crop after the first one was cut off. This was in some experiments made at the Agricultural Experiment Station. Later on, corn, pease, oats, rape and millet were planted together and a successful second crop was got of rape and millet, provided the first crop was cut with a scythe and not grazed off. These experiments have been carried on in Michigan owing to the great necessity there for green crops for soiling dairy cows. With us in Louisiana a supplementary supply of forage is very fremanufactured article; furthermore, he quently needed before the new hay has absolute assurance of the contents crop comes in in the regular way, and of his own goods, something he can it might be that some of our experimenters, or some of our experiment stations, could lay the plans for us by means of which we can successfully produce green soiling crops at the earliest possible date in the season. It has been usual in Louisiana to sow corn broadcast, or drilled in close rows, for such purposes, but so far as we know, we have not yet gone on to the point of succotash, which we ought to avail of if it can be made as successful here as it seems to have been made at the Michigan station. - Louisiana Planter.

BLOATED WITH DROPSY.

The Heart Was Badly Affected When the Patient Began Using

Doan's Kidney Pills. Mrs. Elizabeth Maxwell; of 415

West Fourth St., Olympia, Wash., says: "Forover

> three years I suffered with a dropsical condition without being aware that it was due to kidney trouble. The early stages were principally backache and bearing down pain.but I went

along without worrying much until dropsy set in. My feet and ankles awelled up, my hands puffed and became so tense I could hardly close them. I had great difficulty in breathing, and my heart would flutter with the least exertion. I could not walk far without stopping again and again to rest. Since using four boxes of Doan's Kidney Pills the bloating has gone down and the feelings of distress have disappeared."

"No, but her father owns four junk shops."-Chicago News.

COMPLETEST BUSINESS BUILDING

Features of W. L. Douglas' Adminis tration and Jobbing House.

The dedication of the new administration and jobbing house building erected at Brockton, Mass., by the W. L. Douglas Shoe Co. as a part of its mammoth manufacturing plant at Montello was marked by the thoroughness and attention to detail characteristic of the firm in all its undertakings. As the new building is said to be the most complete and convenient of any ever built for a commercial house in the United States, so were the expressions of appreciation by the many persons who visited it for inspection sincere and of a highly congratulatory nature.

The dedicatory program included open house from 11 a. m. to S p. m. with concert by the Mace Gay orchestra and the presence of a Boston caterer to attend to the wishes of all. The building itself afforded a feast for the eye, especially the offices, which are marvels in many ways. Fifteen thousand invitations were sent out, including over 11,000 to the retail dealers in the United States, who, handle the W. L. Douglas Co. shoes, the others' going to shoe manufacturers and all alled industries in Brockton and vicinity. Mr. Douglas will be glad to have anybody who is interested call The new building is situated just north of the No. 1 factory on Spark street, facing the Montello railroad station. Its completion marks the establishment of a modern up-to-date wholesale jobbing house and office building. Mr. Douglas has long considered the advisability of a jobbing house, not only for the purpose of supplying his own retail stores more readily, but that the 11,000 dealers throughout the United States handling the W. L. Douglas shoe might be able to obtain shoes for immediate use with. greater facility.

Under the present system all shoes are manufactured to order, and customers sometimes lose sales waiting for shoes to arrive. With the new jobbing house they will be enabled to have their hurry orders shipped the same day they are received, which will be far more satisfactory to the customer and will result in a largely-increased business to the W. L. Douglas Shoe Co. The new building is 260 feet long

OPERATION AVOIDED EXPERIENCE OF MISS MERKLEY

She Was Told That an Operation Was Inevitable. How She Escaped It.

When a physician tells a woman suffering with serious feminine trouble that an operation is necessary, the very thought of the knife and the operating table strikes terror to her heart, and our hospitals are full of women coming for just such operations.

There are cases where an operation is the only resource, but when one considers the great number of cases of menacing female troubles cured by Lydia E. Pinkham's Vegetable Compound after physicians have advised operations, no woman should submit te one without first trying the Vegetable Compound and writing Mrs. Pinkham, Lynn, Mass., for advice, which is free.

Miss Margret Merkley, of 275 Third Street, Milwaukce, Wis., writes:

Dear Mrs. Pinkham;

"Loss of strength, extreme nervousiness shooting pains through the pelvic organs, bearing down pains and cramps compelled me to seek medical advice. The doctor, after making an examination, said I had a female trouble and ulceration and advised an operation. To this I strongly objected and decided to try Lydia E. Pinkham's Vegetable Compound. The ulceration quickly healed, all the bad symptoms disappeared and I am once more strong, vigorous and well."

Female troubles are steadily on the increase among womes. If the monthly periods are very painful, or too frequent and excessive-if you have pain or swelling low down in the left side, bearing-down pains, don't neglect yourself: try Lydia E. Pinkham's Vegetable Compound.

make picnics more enjoyable by making the preparations easier.

AGGRAVATING ECZEMA.

Troubled Badly For Several Years With Eczema on Limbs-Another Wonderful Cure by Cutlcura.

"For several years 1 was troubled badly with an eczema on my limbs and wrists. Physicians in several towns had prescribed for me without giving me any results. I had often used Cuticura Ointment and received relief temporarily. In the spring of 1904 I took the Cuticura Remolvent Pills and used the Cuticura Ointment for about five weeks, and at the end of that time there was not a blotch on me anywhere. This spring I took a few vials of the Cuticura Resolvent Pills as a precautionary measure, and will continue to do so every spring simply as a spring tonic, as they are so easy to carry with you, and they certainly fix your blood for the ensuing year. I now use only Cuticura Soap. The Cuticura Ointment and Pills certainly cured me of an aggravated case of cczema. St. Clair Mc-Vicar, San Antonio, Texas, July 6, 1905."

The sick sinner's sixth sheep is sick.

never know with the ready-made fertilizers, unless he goes to the expense of having them analyzed.

Most fertilizers and most soils need a higher percentage of potash than the general run of "goods" furnish. But as soon as the farmer tries to buy anything other than the standard analysis he must pay such high prices that he usually drops the idea. By mixing at home he can make any formula he thinks necessary, with only a slight increase in cost.

Suppose the tobacco farmer wants an 8-4-7 goods (eight per cent. phosphoric acid, four per cent. nitrogen and seven per cent. potash).

Materials needed are: One thousand pounds sixteen per cent. acid phosgypsum or plain dirt.

The blood runs about fourteen per from \$30 to \$35 per ton for 8-4-7 goods; he can mix them himself for \$23 to \$25 per ton, saving from \$10 to \$12 per ton on their cost.

These materials can probably be bought enough cheaper than the commercial fertilizers to allow the farmer \$8 or \$10 for his work.

Clover, vetch, soy beans, cowpeas the nitrogen a crop needs; ground bone or acid phosphate is a cheap source of phosphoric acid. But potash can be inches apart. An ordinary grain drill restored to the soil only by the use of may be used, stopping up two out of kainit or sulphate or muriate of potash. every three tubes. Cultivate lightly It is usually advisable to supply the growing crop with twice as much potash as ammonia, and a slightly larger quantity of phosphoric acid. It need hardly be pointed out that since the manufacturers have to buy all their potash in Germany, they do their best to make the farmer believe he needs but little of it on his lands.

On stiff clay soils, when growing wheat or cotton, kainit prevents rust also damage by frost and drought. To bacco, potatoes, strawberries and pea nuts need a heavy percentage of pot

ash.

O. G. B., Burk, Va., writes: I wish some information about the meal made by grinding in corn with the cob. Is cattle or horses?

several classes of stock with good sat- thrive .- Poultry Life in America. isfaction during recent years. If corn is cheap, say less than forty cents a bushel, it will hardly pay to grind it,

When to Sow Cowpeas.

Peas should not be sown until the ground is warm. If sown earlier the phate; 300 pounds dried blood; 280 seed may germinate, but if cold weathpounds sulphate of potash; 420 pounds | er follows the growth may be permanently stunted. The best fertilizer to use on peas is 100 to 150 pounds of cent. ammonia, and costs \$50 per ton. high grade acid phosphate, or basic Sulphate of potash runs fifty per cent. | slag, with twenty-five to fifty pounds of pure potash and costs about \$60 per muriate of potash. An application of ton. The farmer must pay the dealer 300 to 500 pounds of agricultural lime will sometimes prove helpful. The principal objection to the use of this kind of lime is often the cost. The manufacturers ask an exorbitant price for it, but it is in a convenient form to apply. Nitrogen, as a rule, is not necessary for the pea crop as the peas generally produce an abundance of nodules, enabling the plant to feed and similar crops will furnish most of freely on the nitrogen contained in the atmosphere. We generally prefer to sow the peas in drills, say twenty-four

with a weeder or any surface working implement until the vines begin to spread. Peas sown in drills do not tangle so badly and stand up better; hence they can be cut for hay to better advantage .- Professor Soule.

Black Pepper For Poultry.

There is as much difference in the effect that black and red pepper has on chickens, as there is almost between wheat and corn. Red pepper acts as a hurtful stimulant, black pepper as a wholesome corrective. Chickens and turkeys that are fed black pepper always thrive. In the writer's experience, whenever I have a chick that seems out of sorts, the very first thing I do is to give a grain of black pepper. Of course, the chick must have grit. there any value in it for feeding either that is good and sharp to digest it well, but sharp grit must always be We have fed corn and cob meal to at hand, if birds would in any measure

Disappearing Forests.

The National Hardwood Lumber ASsociation at its recent meeting in Memphis adopted a report that presented the dire possibilities of the destruction of the forests in the short period of thirty-five years. It was estimated that there now stood in the United States in the neighborhood of 1,475,000,000,000 feet of lumber, but :hat 45,000,000,000 feet of lumber was being cut every year. The report re commended the immediate prohibition of log exports and/ exemption from axes of tree plantations. Attention was called to the desirability of State legal enactments along the last line, and some constitutional provision by the general Government of like effect. Mention was made of the custom prevailing in France of requiring a tree to be planted for every tree cut down. -From Daily Consular and Trade Re-

DOCTOR'S SHIFT

Now Gets Along Without It.

A physician says: "Until last fall I used to eat meat for my breakfast and suffered with indigestion until the meat had passed from the stomacb.

"Last fall I began the use of Grape-Nuts for breakfast and very soon found I could do without meat, for my body got all the nourishment necessary from the Grape-Nuts, and since then I have not had any indigestion and am feeling better and have increased in weight.

"Since finding the benefit I derived from Grape-Nuts I have prescribed the food for all of my patients suffering from indigestion or over-feeding and also for those recovering from disease where I want a food easy to take and certain to digest and which will not overtax the stom-

and 60 feet wide and two stories in height. The jobbing department will occupy the entire lower floor, while the offices will occupy the second floor. Leaving the new jobbing house on the first floor, the main staircase ascends_to the second floor level in two divisions separating on the first landing and meeting again upon the fourth, where the large Palladian window is situated, which appears over the entrance.

At the head of the staircase in the mosaic floor appears the word "Atrium," the name of the inner hall, planned and decorated after the manner of the central apartment of the Pompelian house. This room is directly in the center of the main building, being 26x68 and 16 feet in height, and is lighted by three large celling skylights of classic design.

Around the atrium are placed the private offices, where the heads of the departments are located, with their assistants. Beginning at the right of the main entrance, in order, are those of the C. F. Richmond, buyer; H. T. Drake, general superintendent; Hon. W. L. Douglas, president; and H. L. Tinkham, treasurer. They are finished and furnished in mahogany and are. ensuite. Mr. Douglas' own room occupies the southwest corner of the building, and is a very handsome apartment. To the left of these comes the room of C. D. Nevins, assistant treasurer, Mrs. Marion Shields, correspondence clerk, and the store depariment.

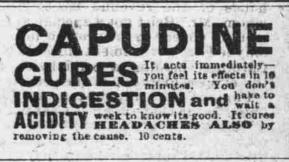

On the east of the atrium and opening into this hall are two alcoves separated by mahogany counters, the fronts of which are plate glass and grilles of bronze. These are the offices of Warren Weeks, paymaster, and Harry L. Thompson, the bookkeeper.

The next in order to the left are two rooms devoted to the credit department, one the private office of A. T. Sweetser and the other occupied by his clerks. The next two offices are those of F. L. Erskine, advertising manager. and his assistants.

The three other rooms completing the outer wall line of the atrium are the reception room to the left of the staircase hall, directors' room and lavatory and the sample room. Here are located the telegraph instruments, telephone switchboard and booths for use of guests.

The directors' room is a fine chamber occupying the space in the northwest corner of the building. This room is finished and furnished in ma-
