### SOME 1918 GARDEN NEEDS

Market gardens near large consuming centers should be increased so as to meet, as nearly as possible, the needs of the community, and in order to obviate the necessity of transporting such products from distant points.

The planting of home gardens, especially for family needs and for preserving food for future use, again should be emphasized.

The commercial production of perishables generally should be increased above normal wherever it is reasonably clear that transportation and marketing facilities will be available.

—By U. S. Dept. of Agr.

Better to grow garden products than weeds on the vacant lot.
